COURSE CURRICULUM

B.Sc. Microbiology

Batch: 2024-2025
Academic Year: 2024-2025
Updated on: July, 2024

GSFC University
School of Science, Vigyan Bhavan, P. O. Fertilizernagar, Vadodara - 391750, Gujarat, India

VISION

- GSFCU strives to be the best compact boutique institution with a futuristic approach, encouraging student centric culture and sharpened focus on developing industry ready & employable students with all-round development.

MISSION

- Establish an institution, which promotes creativity and innovation.
- Develop unique quality standards for academic excellence and pedagogical innovations.
- Remain agile through learning ecosystem with flexible processes & systems.
- Holistic growth for industry readiness.

No.	Programme Outcomes (POs)	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
PO1	Basic Knowledge: To impart knowledge regarding basic concepts of applied chemical sciences.	Remembering and Understanding	Explain, Describe, Discuss, Recall, Locate
PO2	Interdisciplinary approach: To explain the relationships between chemical sciences, biological sciences, physical sciences and mathematical sciences.	Application and Analysing	Apply, Practice, Interpret, Select, Correlate
PO3	Practical learning: To perform procedures as per laboratory standards in the areas of Chemical Sciences and to think analytically.	Analysing	Compare, Classify, Select, Investigate
PO4	Effective Communication and social Interaction: To communicate effectively in terms of reading, writing, speaking and delivering the view to others.	Understanding	Explain, Describe, outline, Predict, Summarize
PO5	Ethics: To culminate and understand the moral values for any of the subjects with respect to good practices and humanity.	Evaluating	Judge, Assess, Estimate, Predict, Argue
PO6	Environment and Sustainability: To explain the importance of ecological balance along with conservation of natural resources for human wellbeing.	Creating	Construct, Develop, Produce

No.	Programme Specific Outcomes (PSOs)	Blooms' Taxonomy Domain	Blooms' Taxonomy SubDomain
PSO1	Students will gain and apply knowledge of scientific concepts such as chemistry, physics, mathematics, organic chemistry, inorganic chemistry, physical chemistry, analytical chemistry and computer applications in chemistry to solve problems related to the field of Chemistry.	Remembering and Understanding	Explain, Describe, Discuss, Recall, Locate
PSO2	Students will be able to demonstrate learning skills to work as a team in a multidisciplinary environment.	Application and Analysing	Apply, Practice, Interpret, Select, Correlate
PSO3	Students will be able to design and develop sustainable solutions to major environmental/biological problems by applying appropriate chemistry tools.	Analysing	Compare,Classify, Select, nvestigate
PSO4	Students will be able to demonstrate effective writing and oral communication skills.	Understanding	Explain, Describe, outline, Predict, Summarize
PSO5	Students will have knowledge and understanding of norms and ethics in the field of chemistry.	Evaluating	Judge, Assess, Estimate, Predict, Argue
PSO6	Students will be able to design, perform experiments, analyze and interpret data for investigating complex problems in chemistry and related fields.	Creating	Construct, Develop, Produce

About the Program:

Science is the basic foundation of any technological and engineering creation. In view of the changing scenario at the national and international level in the field of Science and Technology, there is a great demand for basic sciences with considerable knowledge of its

applications. GSFC University is committed to high academic standards.

The B.Sc. (Hons.) Microbiology Program is an Honours Degree which is designed for Six Semesters (Three Years) in such a way that a good basic foundation of subjects is laid and applications along with recent developments are covered. Students will also get theoretical and practical knowledge by undergoing industrial internship after every semester.

The more focused specialization course of Microbiology is designed to full fill recent demands of industrial career. The B.Sc. (Hons.) Microbiology Program provides an opportunity to make a career in R&D, Industries and Academic Institutions. Opportunity for the placement may be provided by the Institute.

COURSE CODE BSMO111	COURSE NAME Cell Biology	SEMESTER I

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	00	75	3	1	0	4

Course Pre-requisites	School Level Understanding of Biology and a keen interest in learning.
Course Category	Professional Core Courses
Course focus	Employability
Rationale	The subject "Cell Biology" provides a comprehensive understanding of life's foundation through units on cell structure, organelles, and functions. It covers molecular aspects, the endomembrane system, cell division, and essential research tools, fostering insights into biology's intricate workings.
Course Revision/ Approval Date:	07/11/2023
Course Objectives (As per Blooms' Taxonomy)	**To enable the student to:** 1. Gain the basic knowledge and understanding of basic concept and structure of cells and cell organelles. 2. Understand the molecular structure and function of major organelles. 3. Understand and analyze the role of endomemranous cell organelles 4. Learn and understand cell division and cell cycle. Understand and apply the basic tools in cell biology.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Basic concept of cell and structure of organelles Introduction to the concept of cell and evolution of eukaryotic cells. General structure and constituents of cell. Similarities and distinction between plant and animal cells. Structure, composition and function of cell wall and the cell membrane. Membrane transport.	20%	9
Unit 2: Molecular structure and function of major organelles Nucleus - Nuclear envelope, nuclear pore complex and nuclear lamina. Chromatin – Molecular organization. Chloroplast, Mitochondria, Lysosomes, Peroxisomes, Vacuoles.	20%	9
Unit 3: The Endomembrane system Endoplasmic reticulum, Golgi Apparatus, Ribosomes, Ribosomes in relation to cell growth and division. Cytoskeleton: structure, composition and function. Cilia and flagella, Centrioles, Extracellular matrix and Cell adhesion in cell cycle regulation	20%	9
Unit 4: Cell division and cell cycle	20%	9

Mitosis and Meiosis. Eukaryotic cell cycle. Cell cycle control in prokaryotes and eukaryotes.		
Unit 5: Basic tools in cell biology Basics of Microscopy, Microtomy, Density gradient centrifugation. Staining techniques.	20%	9

List Of Practical	Weightage	Contact hours
1. Good Laboratory Practice and Safety in Microbiology & Biotechnology Lab.	**2%**	2
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, light microscope) used in the microbiology laboratory.	**2%**	2
3. Preparation of various stains	**2%**	2
4. Simple staining of plant sections	**2%**	2
5. Simple staining of bacterial culture and wet mount of Hay infusion	**2%**	2
6. Separation of Cell organelles by Sucrose Gradient (Virtual Demo).	**2%**	2
7. Negative staining	**2%**	2
8. Observation of various stages of mitosis by permanent slides	**2%**	2
9. Observation of various stages of meiosis by permanent slides	**2%**	2
10. Sterility practices in cell and tissue culture	**2%**	2
11. Cell culture, preservation and revival of Animal Cell Culture (Demo) & Preservation of Bacterial culture by Glycerol stock method	**2%**	2
12. Measurement of cell viability of yeast cell by MTT or (Methylene blue) Trypan blue assays.	**2%**	2
13. Revision	**2%**	2
14. Revision	**2%**	2
15. Revision	**2%**	2

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1: Understand the structure, composition and function	Remember, Understanding	Describe

ofcell organelles.		
CO2: To describe physiological processes and molecular mechanisms regulated by cell organelles.	Remember, Understanding, apply	Explain
CO3: Understand and analyze the role of endomembranous system.	Understanding, Analyze	Explain
CO4: Understand the principal and types of cell signaling.	Understanding	Describe
CO5: Remember, understand and apply the basic tools in cell biology.	Remember, Understanding	Describe

Learning Resources	
1.	**Reference books:** 1. Essential Cell Biology by Bruce Alberts, Dennis Bray, Karen Hopkin and Alexander Johnson. 2. Karp, G. Cell and Molecular Biology: Concepts and Experiments. Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
45	30	00	75	3	1	0	4

Course Pre-requisite	School Level Understanding of Biological molecules and a keen interest in learning.
Course Category	Core Professional
Course Focus	Employability
Rationale	Comprehensive understanding of biomolecules, their functions, and biological roles. It discusses about the structure, functions, and properties of carbohydrates, lipids, nucleic acids, amino acids, proteins, and enzymes, providing a foundation in biochemistry and molecular biology for understanding life processes.
Course Revision/ Approval date	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	**To enable the student:** 1. To understand the structure, function, and properties of carbohydrates and analyze its significance in biological processes. 2. To remember the structure, functions and classification of lipids. 3. To understand and remember physical and chemical properties of nucleic acids and analyse its significance. 4. To understand and analyse the structure and function of amino acids. 5. To understand the nomenclature of enzymes and its significance..

Course Content	Weightage	Contact Hours
Unit 1: Carbohydrates Structure, Function and properties of Monosaccharides, Disaccharides and Polysaccharides, Glycoprotein's and their biological functions.	20%	9
Unit 2: Lipids Structure and functions –Classification, nomenclature and properties of fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids, cerebrosides, gangliosides, Prostaglandins, Cholesterol.	20%	9
Unit 3: Nucleic acids Structure and functions: Physical & chemical properties of Nucleic acids, Nucleosides & Nucleotides, purines & pyrimidines,. Biologically important nucleotides, Double helical model of DNA structure and forces responsible for A, B & Z – DNA, denaturation and renaturation of DNA, types of RNA.	20%	9
Unit 4: Amino acids A historical prospective. Amino acids & Proteins: Structure & Function.	20%	9

Structure and properties of Amino acids, Types of proteins and their classification. Different Level of structural organization of proteins, Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins.		
Unit 5: Enzymes Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme, Cofactors coenzyme, prosthetic groups, metalloenzymes, monomeric & oligomeric enzymes and Vitamins.	20%	9

List Of Practical	Weightage	Contact hours
1. Qualitative test for Carbohydrate: Iodine test	2%	2
2. Qualitative test for Carbohydrate: Benedict test	2%	2
3. Identification of sugars – char (Molisch, Iodine, Benedict, Barfoed, Seiwanoff, Osazone)	2%	2
4. Identification of sugars – char (Molisch, Iodine, Benedict, Barfoed, Seiwanoff, Osazone)	2%	2
5. Qualitative test for lipids: solubility, transluscent, acrolein, Hubbles test for saturated/unsaturated lipids, saponification, Burchard test for cholesterol	2%	2
6. Qualitative test for lipids: solubility, transluscent, acrolein, Hubbles test for saturated/unsaturated lipids, saponification, Burchard test for cholesterol	2%	2
7. Measure Saponification value of oil/fat	2%	2
8. Detection of DNA by Diphenyl Amine method	2%	2
9. Detection of RNA by Orcinol method	2%	2
10. Qualitative test for proteins: Biuret, Nin-hydrin spot, Sulphur	2%	2
11. Detect presence of protein from various samples (egg white, germinating sprouts)	2%	2
12. Revision	2%	2
13. Revision	2%	2
14. Revision	2%	2
15. Revision	2%	2

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able:		
CO1: Understand and analyze the structural diversity of carbohydrates and glycoproteins, and their roles in biological functions.	Understand, Analyse, Remember	Define, Classify & Demonstrate
CO2: Classify lipids by structure and function, analyze their roles in cellular processes, and evaluate essential fatty acids' significance in nutrition and health.	Analyse, Apply, Understand	Classify, Describe & Demonstrate
CO3: Explain the physical and chemical properties of nucleic acids, including DNA structure, RNA types, and the importance of nucleotides.	Understand, remember	Explain, Describe & Demonstrate

CO4: Analyze the historical context of amino acids and proteins, classify proteins, evaluate their structural organization, and explain denaturation processes.	Remember, Analyse	Define Describe
CO5: Describe enzyme nomenclature and classification, identify enzyme components, explain cofactors, and evaluate the role of vitamins in enzymatic reactions.	Understand, Apply	Define, Classify, Describe & Demonstrate

COURSE CODE BSCM116	COURSE NAME Basics of Chemistry - I	SEMESTER- I

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
30	30	00	60	2	1	0	3

Course Pre-requisites	Basic understanding of high school chemistry.
Course Category	Generic Elective
Course Focus	Skill Development
Rationale	This course aims to provide a comprehensive understanding of fundamental chemical principles, including atomic structure, bonding, solution chemistry, resonance, and chemical kinetics, essential for advanced studies in chemistry and related fields.
Course Revision/ Approval date	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: **Understand** the principles of atomic structure and electronic configurations. 2: **Apply** knowledge of chemical bonding theories to explain bond formation. 3: **Analyze** various factors affecting solubility and solute-solvent interactions in solutions. 4: **Evaluate** the concept of resonance and its application in inorganic and organic compounds. 5: **Interpret** kinetic data to determine reaction rates and mechanisms.

Course Content	Weightage	Contact hours
Unit 1: Atomic Structure Rules for filling electrons in various orbitals, Electronic configurations of the atoms. Stability of half-filled and completely filled orbitals, concept of exchange energy. Relative energies of atomic orbitals, Anomalous electronic configurations.	20%	6
Unit 2: Chemical Bonding Types of bonds and factors affecting the bond formation, various theories, bond parameters, types of bonds in biomolecule, Hydrophilic and hydrophobic interactions.	20%	6
Unit 3: Solutions & Solvents Solutions: Solutions, types of solutions, solvation energy, lattice energy, Equivalent & molecular mass, mole concept, solubility & factors affecting solubility, Expression for concentration of	20%	6

solutions, polarity of solvents, Importance of dielectric constant of solvents, Solvents other than water, classification of solvents, Dilution factor, serial dilution, Solute– solvent interactions in solutions.		
Unit 4: Resonance Concept of resonance and resonating structures in various inorganic and organic compounds.	15%	4
Unit 5: Chemical kinetics Rate of reaction, differential rate law expressions, Order & molecularity, rate constant, integrated equations (1st, 2nd & 3rd order), nth life of a reaction, Arrhenius equations, temperature dependence of rate constant, energy profile diagrams. Reaction intermediates, Different theories on reaction rate	25%	8

List Of Practicals	Weightage	Contact hours
Polar and Non-Polar Molecules Identification	**10%**	**2**
Preparation of Solutions and Concentration Measurement	**10%**	**2**
Determination of Solubility	**10%**	**2**
Serial Dilution and Calculation of Dilution Factor	**10%**	**2**
Determination of Equivalent and Molecular Mass	**15%**	**2**
To determine the normality and strength of x N $H_2C_2O_4$ by titrating it against 0.2 N NaOH solution	**20%**	**2**
To determine the normality and strength of x N FAS by titrating it against 0.5 N $KMnO_4$ solution	**20%**	**2**

Instructional Method and Pedagogy: Chalk-Talk, Classroom Discussions, Notes, Use of GeoGebra Toolbox.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain

After successful completion of the above course, students will be able to:		
CO1: Identify the rules for filling electrons in various orbitals and describe the electronic configurations of atoms, including the stability of half-filled and completely filled orbitals.	Identify and Describe	Knowledge and Comprehension
CO2: Explain various types of chemical bonds and illustrate factors affecting bond formation, including hydrophilic and hydrophobic interactions in biomolecules.	Explain and Illustrate	Comprehension and Application
CO3: Analyze the factors affecting solubility and solve problems related to solute-solvent interactions, including the calculation of solvation energy and concentration expressions for solutions.	Analyze and Solve	Analysis and Application
CO4: Demonstrate basic knowledge of matrices and determinants and apply it to find the inverse of a matrix.	Evaluate and Discuss	Evaluation and Comprehension
CO5: Calculate reaction rates, rate constants, and interpret kinetic data to determine reaction mechanisms, including the application of Arrhenius equations and understanding energy profile diagrams.	Calculate and Interpret	Application and Analysis

Course Pre-requisites	Knowledge of basic precalculus concepts
Course Category	Discipline Specific Generic Elective
Course focus	Skill development
Rationale	
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: **Demonstrate** knowledge of basic precalculus concepts and skills. 2: **Evaluate** limits, recognize continuity and use the properties of continuous functions. 3: **Find** derivatives of algebraic and trigonometric functions using the definition or basic rules of differentiation. 4: **Find** rates of change, solve related rate problems, Find extreme values in optimization problems. 5: **Apply** the concepts and methods described in the syllabus, solve problems using linear algebra and will know a number of applications of linear algebra..

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction to matrices, Elementary operations on matrices and types of matrices, Symmetric and skew- symmetric matrices,. Rank of a matrix. Row Reduced Echelon form of a matrix and matrix inversion using it.	**20%**	**6**
Unit 2: Determinant of 2 x 2 and 3 x 3 matrices. Inverse of a square matrix Homogeneous and Non-homogeneous linear equations. Application of matrices in solving a system of simultaneous linear equations.	**20%**	**6**
Unit 3: Trigonometry and its identities, inverse trigonometric functions, Concept of a limit and Continuity. Derivative of elementary functions	**20%**	**6**
Unit 4: Rules of differentiation (without proof), Chain rule (without proof), differentiation of implicit functions, Applications of Derivatives: maxima and minima of function.	**20%**	**6**
Unit 5: Standard integration formulae, Integration by the method of substitution, Integration by parts, definite integration, Applications of Integrations: Area of a region.	**20%**	**6**

List Of Practical Tutorial	Weightage	Contact hours
Unit 1: Problem solving on Trigonometry.	**20%**	**3**

Unit 2: Problem solving on differentiation	**20%**	**3**
Unit 3: Problem solving on Integration.	**20%**	**3**
Unit 4: Problem solving on Matrices and Determinants.	**20%**	**3**
Unit 5: Problem solving on solving system of linear equations.	**20%**	**3**

Instructional Method and Pedagogy: Chalk-Talk, Classroom Discussions, Notes, Use of GeoGebra Toolbox.

Course Objectives:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to: CO1: **Understand and Apply** Concepts of linear algebra to find rank and inverse of a matrix.	**Understand and Apply**	Describe, Demonstrate & Examine, Find, Evaluate
CO2: **Apply** Concepts of linear algebra to solve system of linear equation.	**Evaluate**	Demonstrate & Examine, Find
CO3: **Understand and Apply** the knowledge of basic trigonometry and precalculus concepts and skills.	**Remember, Understand and Apply**	Define, Classify, Describe, Demonstrate & Examine
CO4: **Evaluate** derivatives of algebraic and trigonometric functions to find maxima-minima of function of one variable.	**Evaluate**	Demonstrate & Examine, Find, Evaluate
CO5: **Evaluate** integration of algebraic and trigonometric functions and use it find Area of the region.	**Evaluate**	Demonstrate & Examine, Find, Evaluate

COURSE CODE	COURSE NAME	SEMESTER
CBCS103	Indian History and Culture	I

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	30	2	2	0	0	2

Course Pre-requisites	An inquisitive mind, a voracious appetite for reading, a knack for analysis, good vocabulary, willingness to learn and accept different school of thoughts.
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	28-03-2020
Course Objectives (As per Blooms' Taxonomy)	1. **Study** the chronology of major events that happened in India 2. **Understand** the political, social economic, and cultural landscape of India and how it kept on changing and evolving 3. **Understand** the various characters that shaped the destiny of India 4. **Explore** the reasons why India kept on attracting people from all over the world.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Ancient India • The Harappan Civilization • Early States and Economies (c.600 BCE-600 CE) • Early Societies (c. 600 BCE-600 CE)	20%	6
Unit 2: Culture & Religion □ Cultural Developments □ Perceptions of Society □ Changes in Religious Beliefs and Devotional Texts	20%	6
Unit 3: Mediaeval age • An Imperial Capital: Vijayanagara • Agrarian Society and the Mughal Empire • The Mughal Courts	20%	6

Unit 4: Colonialism • Colonialism And The Countryside: ExploringOfficial Archives • 1857 Revolt and its Representation	20%	6
Unit 5: Freedom struggle • Civil Disobedience and Beyond • Partition: Politics, Memories, Experiences • Framing The Constitution: The Beginning of a NewEra	20%	6

Instructional Method and Pedagogy: History involves a lot of storytelling and analysis. Hence, it will be mix of stories, videos, maps, discussions, role plays, power point presentations, timelines

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	30	2	2	0	0	2

Course Pre-requisites	**Environmental Studies**
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	28-03-2020
Course Objectives **(As per Blooms' Taxonomy)**	1. **Impart** Fundamental knowledge about awareness of air pollution 2. **Understand** the various sources which contribute in degradation of air quality 3. **Understand** assessing the air quality through air quality index 4. **Understand** various air pollution control methods and equipment's used by industries 5. **Understand** the importance of extreme air Pollution due to Acid Rain, Global Warming in Environment.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction to Air Pollution: Air and its composition, Air Pollution, Sources of air pollution and its classification, Major air Pollutants and their characteristics, Specific group pollutants such as CFC, GHG etc. Air Pollutants from various industrial sectors. Impact of air pollution on human health and vegetation.	10%	4

Unit 2: Pollutant Dispersion: Concept of atmospheric stability. Adiabatic and Environmental Lapse rate. Plume behavior. Effect of topography, terrain and structure on Pollutant dispersion. Effect of wind on Pollutant dispersion. Concept of Maximum mixing Depth and ventilation Coefficient. Plume Rise and Effective stack height.	20%	6

Unit 3: Air Quality: Introduction to Air quality index and Comprehensive Environmental Pollution Index etc. and its application. Sampling and measurement of air pollutants. Introduction to National Ambient AirQuality Standards	20%	6
Unit 4: Impacts of Air Pollution: Extreme air Pollution scenarios: Acid Rain, Global Warming, Smog, Ozone layer depletion etc. Various treaties and protocols: Kyoto Protocol and Montreal Protocol etc	20%	6
Unit 5: Control methods and equipment: Introduction to control methods and equipment for Particulate matter and gases. Design and working of scrubbers, Electrostatic Precipitator, Gravity settlers, Cyclone separator, Filter bags etc. Other mechanisms of air pollution control such as Biochemical Processes, catalytic Processes etc.	30%	8

Instructional Method and Pedagogy: Presentation, Videos, Chalk-Duster and Notes

Instructional Method and Pedagogy: Presentation**,** Videos, Chalk-Duster and Notes

Course Outcome:*	**Blooms' Taxonomy Domain***	**Blooms' Taxonomy SubDomain***
After successful completion of the above course, studentswill be able to: CO1: **Create** a format and edit documents likeletters, report, applications, templates, etc. in MS Word.	Cognitive	Create
CO2:**Apply** computational methods in MS Excel for estimation, optimization of various properties and work on the data interpretation based on charts.		Apply
CO3: **Create** a standardize and manage the work break down structure consisting of tasks, costs, work, and resources.		Create
CO4: **Create** a presentation based on students' option, ideas, projectdetails, etc. using MS PowerPoint.		Create
CO5 **Create** own address, constitute text body for email, provide necessary attachments, schedule events and meeting, etc. using MS Outlook.		Create

COURSE CODE AECC101	COURSE NAME Fundamentals of English	SEMESTER- I

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
30	00	00	30	2	0	0	2

Course Pre-requisites	Student should have cleared 12th Science
Course Category	Mandatory Course
Course focus	Skills Development
Rationale	It enables humanity to experience the benefits of chemistry when we apply it in the exploitation of materials and energy.
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1. Emphasize the development of listening and reading skills among learners 2. Equip them with writing skills needed for academic as well as workplace context 3. Enable learners of science develop their basic communication skills in English 4. Strengthen the fundamentals in English Language. 5. Build up the confidence to communicate with the world.

Course Content	Weightage	Contact hours
Unit 1: Language Basics Parts of speech, word formation, prefix- suffix, synonyms, antonyms, homophones and standard abbreviations	**20%**	**6**
Unit 2: Elementary Reading/Writing Skills Types of the sentences, structures of the sentences, use of phrases and clauses, punctuation, creative writing and coherence, comprehension, essay, paragraph writing, creative writing	**30%**	**9**
Unit 3: Elementary Spoken Skills Greetings, farewell and introduction, making an apology, accepting an apology, making an appointment, JAM	**30%**	**9**
Unit 4: Presentation Skills Group Discussion, Debate, Public Speaking, Discussion on a specific purpose.	**20%**	**6**

Unit 5: Practicing and Identifying the Common Error Tense, subject-verb agreement, noun-pronoun agreement, articles, prepositions, modal auxiliaries, voice, reported speech	**20%**	**6**

Instructional Method and Pedagogy:
Classroom Lecture, Case Studies, Quizzes, Presentations, Role Play, Expert Lecture (Consultant)

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1: To emphasize the development of listening and reading skills among learners	Understand, Analyse, Remember	Define, Classify & Demonstrate
CO2: To equip them with writing skills needed for academic as well as workplace context	Analyse, Apply, Understand	Classify, Describe & Demonstrate
CO3: To enable learners of Engineering and Technology to develop their basic communication skills in English	Understand, remember	Define, Describe & Demonstrate
CO4: To strengthen the fundamentals in English Language.	Remember, Analyse	Define Describe
CO5: To build up the confidence to communicate with the world.	Understand, Apply	Define, Classify, Describe & Demonstrate

COURSE CODE BSMO211	COURSE NAME Molecular Biology	SEMESTER- I

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
45	30	00	75	3	1	0	4

Course Pre-requisite	School Level Understanding of Biology and a keen interest in learning.
Course Category	Core Professional
Course Focus	Employability
Rationale	The molecular biology course explores fundamental aspects of genetic material, replication, transcription, and translation. It delves into DNA's role as hereditary material, its structures in diverse organisms, replication mechanisms, transcription processes, and translation machinery, fostering a deep understanding of gene expression.
Course Revision/ Approval date	07/11/2023
Course Objectives (As per Blooms' Taxonomy)	**To enable the student to:** 1. Understand the historic perspective, types and structure of genetic material. 2. Gain knowledge about DNA replication mechanism in both prokaryotes andeukaryotes 3. Comprehend the process of transcription in prokaryotes and eukaryotes 4. Familiarize with post-transcriptional processing. 5. Develop an understanding of translation in both prokaryotes and eukaryotes.

Course Content	Weightage	Contact hours
Unit 1: Structures and types of Genetic Material DNA as heritable material, Structure and types of DNA in prokaryotes and eukaryotes, Salient features of double helix, Genome organization in Prokaryotes and Eukaryotes.	20%	9
Unit 2: Replication of DNA Types of replication in Prokaryotes and Eukaryotes, Enzymes and proteins involved in DNA replication. Mechanism of DNA replication in Prokaryotes and Eukaryotes, Telomere replication, Various models of DNA replication.	20%	9

Unit 3: Transcription in Prokaryotes and Eukaryotes Structure, Function and Biological Properties of RNA, The structure and function of gene, promoters and terminators. Transcription Initiation, elongation and Termination, RNA polymerases.	20%	9
Unit 4: Post-Transcriptional Processing Concept of introns and exons, RNA splicing, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA.	20%	9
Unit 5: Translation (Prokaryotes and Eukaryotes) The Genetic Code, Codons and anti-codons, the ribosomes. Translation mechanism in prokaryotes and eukaryotes. Gene Expression in Prokaryotes: the LAC Operon. Gene expression in Eukaryotes.	20%	9

List Of Practical	Weightage	Contact hours
1: Good Laboratory Practice and Safety in Molecular Biology Lab.	2%	2
2: To study the principle and applications of important instruments (pH meter, Centrifuge, Spectrophotometer, Electrophoretic unit) used in the Molecular Biology laboratory.	2%	4
3: To study the principle and applications of important instruments (pH meter, Centrifuge, Spectrophotometer, Electrophoretic unit) used in the Molecular Biology laboratory.	2%	4
4: Pipetting skills	2%	2
5: Basic calculations (normality, molarity, weight conversion) used in molecular biology	2%	2
6: Preparation of solutions for Molecular Biology experiments	2%	2
7: Virtual Lab demonstrations: DNA Isolation, Purification and quantitation	2%	2
8: Virtual Lab demonstrations: RNA Isolation, Purification and quantitation	2%	2
9: Virtual Lab demonstrations: Protein Isolation, Purification and quantitation	2%	2
10: Model Building – DNA structure, replication	2%	2
11: Revision	2%	2
12: Revision	2%	2
13: Revision	2%	2

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments.
Practical exercises are designed to understand the theory as taught in classroom.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1: Understand basic concepts of molecular biology including genome, DNA, RNA	Remember, Understanding	Describe
CO2: Understand and compare the mechanisms of DNA replication in both prokaryotes and eukaryotes and differentiate between them.	Remember, Understanding, Analyze	Explain, Compare
CO3: Understand and compare the mechanisms of DNA transcription in both prokaryotes and eukaryotes and differentiate between them.	Remember, Understanding, Analyze	Explain, Compare
CO4: Understand and compare the post transcriptional modifications of RNA and concepts of splicing and capping.	Remember, Understanding, Analyze	Explain, Describe, Compare
CO5: Understand and compare the mechanisms of translation in both prokaryotes and eukaryotes and differentiate between them	Remember, Understanding, Analyze	Describe, Compare

COURSE CODE BSMO212	COURSE NAME Metabolism	SEMESTER- II

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
45	30	00	75	3	1	0	4

Course Pre-requisite	School Level Understanding of Biological molecules pathways and a keen interest in learning.
Course Category	Core Professional
Course Focus	Employability
Rationale	This course provides a comprehensive study of cellular metabolism, covering the breakdown and synthesis of carbohydrates, lipids, amino acids, and nucleotides. Students will gain insights into energy production and biomolecule regulation, enhancing their understanding of vital biological processes.
Course Revision/ Approval date	09/11/2023
Course Objectives (As per Blooms' Taxonomy)	**To enable the student :** 1. To remember, understand and analyze the knowledge of carbohydrate metabolism. 2. To apply the knowledge of carbohydrate metabolism to explain cellular respiration process. 3. To remember, understand and apply the lipid metabolism. 4. To remember, understand and apply the amino acid metabolism. 5. To remember, understand and apply the nucleic acids metabolism.

Course Content	Weightage	Contact Hours
Unit 1: Carbohydrate metabolism-I Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions and regulation. HMP, PPP, Gluconeogenesis, Glycogenolysis and glycogen synthesis.	20%	9
Unit 2: Carbohydrate metabolism-II TCA cycle, it's central role, interactions, organization, reactions, regulation.Electron Transport Chain, Oxidative phosphorylation	20%	9
Unit 3: Lipid metabolism Triglyceride, cholesterol, phospholipid, lipoproteins and eicosanoids.ß-oxidation of fatty acids, ketogenesis, Fatty Acid synthesis. Synthesis of membrane phospholipids in prokaryotes and eukaryotes.	20%	9
Unit 4: Amino acid metabolism Nitrogen cycle, incorporation of ammonia into biomolecules. Transamination, Deamination and Urea Cycle. Overview of amino	20%	9

acid synthesis		
Unit 5: Nucleotide metabolism Metabolic specializations in Microorganisms. *De novo* synthesis of purine and pyrimidine nucleotides. Biosynthesis of deoxyribonucleotides	20%	9

List Of Practical	Weightage	Contact hours
1. Sugar fermentation of microorganisms.	2%	2
2. Estimation of reducing and non-reducing sugar	2%	2
3. Blood glucose estimation	2%	2
4. Estimation of HDL & LDL	2%	2
5. Estimation of serum urea	2%	2
6. Estimation of serum uric acid.	2%	2
7. Estimation of serum creatinine.	2%	2
8. Demonstration of enzyme assay	2%	2
9. Detection of amino acid by paper chromatography	2%	2

COURSE CODE BSCM216	COURSE NAME Basics of Chemistry - II	SEMESTER- II

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
30	30	00	60	2	1	0	3

Course Pre-requisites	Basic knowledge of general chemistry.
Course Category	Generic Elective
Course Focus	Skill Development
Rationale	This course aims to provide a comprehensive understanding of fundamental and advanced concepts in electrochemistry, organic chemistry, coordination chemistry, stereochemistry, and organic reaction mechanisms, preparing students for further studies or careers in chemistry-related fields.
Course Revision/ Approval date	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1. **Knowledge**: Describe the principles and applications of electrochemistry, organic reactions, coordination compounds, stereochemistry, and organic reaction mechanisms. 2. **Comprehension**: Interpret electrode potentials, Nernst equation, reaction mechanisms, and stereochemical representations. 3. **Application**: Apply knowledge to solve problems related to electrochemical cells, organic reactions, coordination complexes, and stereochemical configurations. 4. **Analysis**: Analyze and evaluate redox reactions, reaction mechanisms, and properties of coordination compounds. 5. **Synthesis**: Design experiments and propose mechanisms for organic reactions, and predict properties and applications of coordination compounds.

Course Content	Weightage	Contact hours
Unit 1: Electrochemistry Electrochemistry: Electrode potential, related problems, Nernst equation & its applications, emf of the cell, related problems, Redox reactions in cells, free energy change & standard EMF of the cell.	20%	6
Unit 2: Organic Chemistry Nomenclature, Introduction to functional groups, chemical & physical properties, Oxidation, reduction, elimination, addition and substitution reactions, reaction intermediates, Heterocyclic	20%	6

compounds, Configuration & projection formula, Optical & geometrical isomerism, Tautomerism, Enantiomerism & its applications. Aromatic compounds.		
Unit 3: Coordination Chemistry Introduction to co-ordinations compounds, Crystal field theory, Color & magnetic properties of complexes, Chelation & applications, biologically relevant coordination compounds	20%	6
Unit 4: Stereochemistry Conformations with respect to ethane, butane and cyclohexane. Interconversion of Wedge Formula, Newmann, Sawhorse and Fischer representations. Concept of chirality (upto two carbon atoms).	20%	6
Unit 5: Mechanism of Organic Reactions Bond fission, Electrophilic and nucleophilic reagents, Types of organic reactions, Stability and reactivity of carbon ions, stability and reactivity of free radicals	20%	6

List Of Practicals	**Weightage**	**Contact hours**
Measurement of electrode potential using standard hydrogen electrode (SHE).		
Identification of functional groups using chemical tests (e.g., bromine water test for alkenes).		
Tollens' test for aldehydes, etc., on known organic compounds.		
Perform simple distillation, liquid-liquid extraction, and thin-layer chromatography (TLC) experiments.		
Redox titrations applications with two examples.		

Instructional Method and Pedagogy: Chalk-Talk, Classroom Discussions, Notes, Use of GeoGebra Toolbox.

Course Outcomes:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**

After successful completion of the above course, students will be able to:		
CO1: Recall and define fundamental concepts in electrochemistry, organic chemistry, coordination chemistry, stereochemistry, and organic reaction mechanisms.	Remember	Knowledge
CO2: Demonstrate understanding by explaining the principles underlying electrochemical processes, organic reactions, stereochemical configurations, and coordination chemistry phenomena.	Demonstrate	Define, Classify, Describe,
CO3: Solve problems involving electrode potentials, Nernst equation, redox reactions, organic reaction mechanisms, and coordination compound properties.	Analyze and Solve	Analysis and Application
CO4: Analyze and interpret data from electrochemical experiments, organic reaction mechanisms, stereochemical relationships, and coordination compound properties to draw conclusions and solve complex problems.	Analyze	Analysis and Application
CO5: Synthesize information to propose mechanisms for organic reactions, design experiments related to electrochemistry and coordination chemistry, and develop strategies to solve practical challenges in these fields.	Synthesis	Application and Analysis

COURSE CODE BSPY216	COURSE NAME Physics – I	SEMESTER- II

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total hours	Lecture	Practical	Tutorial	Total Credit
30	30	00	60	2	1	0	3

Course Pre-requisites	Understanding of basic physics up to school level (10+2 level).
Course Category	Minor (Compulsory)
Course focus	Skill development
Rationale	The fundamental concepts of physics help in understanding the laws of nature and the behaviour of diverse materials under specific conditions. This course is designed to help in understanding the fundamentals of new and emerging technologies that cut across traditional science disciplines, to pursue graduate studies in science.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: To **understand** & **remember** the basic laws of optical concepts and **apply** these concepts to **understand** the working of different optical instruments. 2: To **understand** & **remember** the basic quantities governing in the regime of electricity and electronics and **analyse** respective phenomena in allied areas. 3: To get the knowledge of electromagnetism and their **applications.** 4: To **understand** the fundamental building blocks of matter and **remember** their behaviour to under different conditions. 5: **Understand** the basics of advanced instrumentation.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Applied optics Principles of Ray and Wave Optics, Electronic eye, Human eye, Sensors, Optical Microscopic techniques, Optical properties of material: Dielectric constant, refractive index, optical density, birefringence, absorption coefficient, optically sensitive material/system.	**20%**	**6**
Unit 2: Fundamentals of electricity and electronics Insulators, conductors and semiconductors, current, potential. EMF and resistors, Ohm's law, Kirchhoff's laws, Intrinsic and Extrinsic semiconductors, Diodes (PN, Zener, LED, Photodiode, Solar Cell) & Transistors (BJT) with I-V Characteristics, Photosynthesis, Wearable Electronic devices.	**20%**	**6**

Unit 3: Magnetostatics Magnetic force, magnetic field and magnetization, Hysteresis. EM Waves, Emission and absorption spectrum, Application of EM Waves.	**20%**	**6**
Unit 4: Properties of matter Introduction and application of nano-materials, composite materials, Ecofriendly materials.	**20%**	**6**
Unit 5: Instrumentation Physics Fundamental of optical microscopy, scanning electron microscopy. transmission electron microscopy, X-ray diffractometer, Raman effect and its applications	**20%**	**6**

List Of Practical	Weightage	Contact hours
Based on theory contents		

Instructional Method and Pedagogy:
Utilizing models, Power point Presentations, films on various topics of physics, group discussions and seminars are some of the methods adopted to improve the student ability to grasp the principles of physics. The hands-on sessions during laboratory sessions will help students to apply the concepts learnt and analyse the results and draw conclusions.

Course Outcome:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to:		
CO1: **Describe** & **demonstrate** the fundamental concepts related to optics and working principles of various optical instruments.	Remember & Understand	Define, Classify, Describe, Demonstrate
CO2: **Define** & **classify** different electric and electronic materials and **demonstrate & analyse** the working of different electronic systems.	Understand, Remember, Analyse & Apply	Define, Classify, Describe, Demonstrate & Examine
CO3: **Define** the fundamental notions related to electrostatics & magnetostatics and, **explain** the basics of EM waves, their **classification** and respective applications.	Understand, Remember, Assess & Apply	Define, Classify, Describe & Demonstrate
CO4: **Classify** the materials based on their properties and **analyse** their behaviour under different conditions.	Understand, Analyse	Classify, Describe, Demonstrate & Examine
CO5: **Describe** the fundamental notions and working principles related to the advanced instrumentation techniques and **analyse** their applications in allied areas.	Understand & Analyse	Describe & Demonstrate

CBCS202	Introduction to Social Work	II

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	30	2	2	0	0	2

Course Pre-requisites	
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	1. To know the basic values and principles of Social Work 2. To equip candidates with the knowledge of working with people and the ability in problem solving through Field experience 3. To promote among students a sense of commitment and dedication to strive for equity, social justice, social harmony and peace 4. To sensitize the students to involve themselves for the cause of poor, subaltern under privileged and disadvantaged section of the society. 5. To develop confidence among the students to feel themselves as change agents for Social change and transformation.

Course Content	Weightage	Contact hours
Unit 1: An Introduction to Social Work **Theory**: 1. Social Work: Concept, Meaning, Definition and Objectives 2. Social Work: Nature, Scope and Functions 3. Emergence of Social Work: UK, USA, India 4. Development of Social Work Education in India **Practical**: (Give the list of Experiments)	20%	6

Unit 2: Values and Ethics in SocialWork Practice **Theory**: 1. Assumptions and Values of theSocial Work 2. Codes of Ethics 3. Principles of Social Work 4. Social Work and its Relation toHuman Rights and Social Justice **Practical**: (Give the list ofExperiments)	20%	6
Unit 3: Social Work Profession inIndia **Theory**: 1. Profession: Meaning Definition and Attributes 2. Professionalization of Social Workin India 3. Issues and Challenges before Social Work Profession 4. Status of Social Work Profession in India **Practical**: (Give the list ofExperiments)	20%	6
Unit 4: Social Work Philosophy &Methods **Theory**: 2. 1. Basic values and Ethics, Philosophy and Principles ofsocial work, 3. Types, Functions and Agencies of social control **Practical**: (Give the list ofExperiments)	20%	6
Unit 5: Approaches and Ideologies **Theory**: 1. Professional v/s Voluntary Approaches to Social Work 2. Ideology of Action Groups and Social Movements 3. Generalist Approach toSocial Work Practice 4. Influence of Political Ideology on Social Welfare Policies and Programmes **Practical**: (Give the list ofExperiments)	20%	6

Instructional Method and Pedagogy: Presentation**,** Videos, Chalk-Duster and Notes

Course Outcomes	1. Social Work curriculum is designed to provide avariety of Opportunities to develop and enhance skills.
	2. The course work will Aid learning, observation and analysis of the realities and experience participation in social intervention.
	3. The learner is encouraged to move to being an independent worker.
	4. Will introduce students to their social responsibilities and contribute to the society
	5. will update students on various governmental and non-governmental organizations and their workings
Additional Information to enhance learning	Block Field Work with reputed GOs, NGOs and INGOs

Course Pre-requisites	Fundamentals of Internet and Web
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	1. To develop the fundamental understanding of Web Design and learning the development of Professional Website 2. To understand the basics of web design using HTML 5 3. To learn the fundamentals of scripting using JavaScript 4. To understand the presentation and design aspects of web page using CSS 5. To learn the website development using Content Management System (CMS)

Course Content	Weightage	Contact Hours
Unit I: Introduction to Web Development World Wide Web and Hypermedia, Hypertext Design, Introduction to HTML, HTML Elements & Tags, Formatting, Links, Images, Tables, Web Forms, Form Elements, Formatting Tags, Images, Multimedia	20%	6
Unit II: HTML 5 Semantic Elements, Form Elements, Form Attributes, Form Input Types, Media Elements, Canvas, SVG	20%	6
Unit III: Java Script Understanding Java Script, Java Script Variables, String, Array, Objects, Functions, Conditional Statements, Looping Statement, Understanding &Managing the Events, Working with Document Object Model (DOM)	20%	6
Unit IV: Cascading Style Sheets(CSS) Introduction, CSS Box Model, Managing Borders, Backgrounds, Text Effects, Transitions, Animation, Multiple Columns, Inline, Internal and External CSS	20%	6
Unit V: Developing Website using CMS	20%	6

Introduction of Content Management System(CMS), CMS with WordPress, Google Sites, Magento Fundaments of Webhosting Introduction to Bootstrap		

Instructional Method and Pedagogy: Demonstration with Hands-on Practice, Powerpoint Presentation

Course Outcomes	After the successful completion of this course, students will be able to:
	1. Understand the concepts of Website Development
	2. Design Web Site using different presentation styles
	3. Demonstrate the Dynamic Website Development
	4. Understand the concept of Web Hosting and Management

Learning Resources	
1.	Textbook: 1. Sams Teach Yourself HTML, CSS and JavaScript, All in One byJulie C. Meloni, Pearson Education, Inc.
2.	Reference Book: 1. HTML 5 Black Book, Dreamtech Press

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	30	2	2	0	0	2

Course Pre-requisites	Fundamentals of Internet and Web
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	
Course Objectives **(As per Blooms' Taxonomy)**	1. To familiarize the students with Engineering Design process and induce design thinking.

Course Content	Weightage	Contact hours
Unit 1: Introduction: Engineering design meaning and significance Definition, considerations and assumptions; role of adesigner, design vocabulary: design levels and design process	10%	6
Unit 2: Problem Definition: Need &Goal Objective tree – illustrative examples; market analysis and information gathering; identification of needs and user requirements; Functions and specifications. Quality Function Deployment (QFD) method – House ofQuality – Kano model for customer satisfaction.	30%	8
Unit 3: Conceptual design: generation of alternative concepts Design space – Morphological chart anddesign thinking; Brainstorming – creativity – developing concepts from functions; Illustrative cases.	30%	8
Unit 4: **Concepts evaluation andselection** Decision matrix; applying metrics to objectives towards selection of preferred concepts. Numerical evaluation matrices - Priority checkmark method – The best-of-class chart.	30%	8

Instructional Method and Pedagogy: Project Based Learning Peer BasedLearning Interactive Sessions

Course Outcomes	After the successful completion of this course, students will be able to:
	1. identify problems, gather data, prepare need statements, generate alternative conceptual solutions and choose the best concept

Learning Resources	
1.	Textbooks: Engineering Design – a project based introduction, Clive L. Dym, Patrick Little and Elizabeth J Orwin, Wiley India edition, 2016.
2.	Reference Books: Engineering design process, Yousef Haik and Tamer Shahin, Cengage Learning, 2011.

30	0	30	2	2	0	0	2

Course Pre-requisites	Fundamentals of Internet and Web
Course Category	Generic Elective
Course focus	
Rationale	
Course Revision/ Approval Date:	
Course Objectives **(As per Blooms' Taxonomy)**	1. To give knowledge about fundamentals of Automotive engineering. 2. To enable student to understand main systems and assemblies essential for Automobile. 3. To provide students knowledge about modern vehicle technology. 4. To enable students to understand basic automotive concepts of off road vehicles. 5. To enable students to understand alternative fuels and energy systems.

Course Content	Weightage	Contact hours
Unit 1: • Automotive Engines • Material Science and Technology	20%	06
Unit 2: • Automotive Chassis • Vehicle Body Engineering • Industrial Engineering	20%	06
Unit 3: • Automotive Pollution and Control • Quality Control and Reliability Engineering • Automotive Electrical Systems and Electronics	20%	06
Unit 4: • Operations Research and Industrial Management • Ethics in Engineering and Transport Management	20%	06

Instructional Method and Pedagogy: Hands on activities/ Power Point Presentati on/ Chalk/ Duster, Power Point Presentati on

Course Outcomes	1. Students will get knowledge about fundamentals of Automotive engineering.
	2. Students will understand main systems and assemblies essential for Automobile.
	3.Students will have basic knowledge about modern vehicle technology.
	4. Students will understand basic automotive concepts of off road vehicles.
	5. Students will understand alternative fuels and energy systems.

Learning Resources	
1.	Textbooks: 1. Karoly Jarmai and Betti Bollo, Vehicle and Automotive Engineering , Springer Publications
2.	Reference Books: 1. Nikolaos Gkikas, Automotive Ergonomics Driver Vehicle Interaction, CNC Publications
3.	Journals & Periodicals: 1. Automotive Engineering, SAE International

COURSE CODE AECC201	COURSE NAME Communication Skills in English	SEMESTER II

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	00	00	30	30	00	00	2

Course Pre-requisites	Student should have cleared First Semester of Bachelor of Science
Course Category	Mandatory Course
Course focus	Communicational Skills
Rationale	It enables humanity to experience the benefits of chemistry when we apply it in the exploitation of materials and energy.
Course Revision/ Approval Date:	14/03/2023
Course Objectives **(As per Blooms' Taxonomy)**	1. To enable learners, develop their basic communication skills in English. 2. To equip them with writing skills needed for academic as well as workplace context. 3. To prepare students for professional communication at world level. 4. To develop corporate communicational attitude. 5. To strengthen digital communication using technological modules and expertise.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Communicative Skills Basics of Communication, Verbal & Non-verbal, Communication, Barriers to Effective Communication, Strategies of Effective Communication	**20%**	**6**
Unit 2: Grammar & Vocabulary: Types of sentences, Synonyms, Antonyms, Tenses - Past, Present & Future, Homophones, Modals, Verb forms, Phrasal Verbs, Error correction, commonly misused words, technical terms	**15%**	**5**
Unit 4: Writing Skills & Speaking Skills: Letter writing - Complaint & Leave, Article, Precise writing, Report writing, Note-taking and Note-making, Creative Writing Introducing self, Interview Skills, Public Speaking, Debates, Role plays, Group Discussion.	25%	7
Unit 3: Listening & Reading Skills: Definitions (Listening & Reading), Types of Listening, Barriers to Effective Listening, Traits of a Good Listener, Types of Reading, Techniques of Effective Reading, Reading Tasks (Critical &	**30%**	**9**

Inferential)		
Unit 4: Writing Skills & Speaking Skills: Letter writing - Complaint & Leave, Article, Precise writing, Report writing, Note-taking and Note-making, Creative Writing Introducing self, Interview Skills, Public Speaking, Debates, Role plays, Group Discussion.	**25%**	**7**
Unit 5: ICT/ Digital/ E-Skills: Computer Assisted Language Learning (CALL), Mobile Assisted Language Learning (MALL), Emails, Blogs, Digital/ E-Portfolio, Filling Online Application Forms	**20%**	**6**

Course Objectives	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to:		
CO1: To emphasize the development of listening and reading skills among learners	Understand, Analyse, Remember	Define, Classify & Demonstrate
CO2: To equip them with writing skills needed for academic as well as workplace context	Analyse, Apply, Understand	Classify, Describe & Demonstrate
CO3: To enable learners of Engineering and Technology develop their basic communication skills in English	Understand, remember	Define, Describe & Demonstrate
CO4: To strengthen the fundamentals in English Language.	Remember, Analyse	Define Describe
CO5: To build up the confidence to communicate with the world.	Understand, Apply	Define, Classify, Describe & Demonstrate

Rationale	The present course will give the idea about different concepts of Vedic Mathematics like Arithmetic, Algebra, Geometry and Trigonometry.
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: **Understand** Concepts of Vedic Mathematics to promote joyful learning of mathematics,. 2: **Learn** Vedic Mathematics to enhance computation skills. 3:.**Develop** logical and analytical thinking 4: **Apply** Vedic mathematics to solve problems of Algebra, geometry and Trigonometry. 5: **Understand** the rich heritage of mathematical temper of Ancient India

Course Content (Theory)	Weightage	Contact hours
Unit 1: History of Vedic Maths and its Features, Vedic Maths formulae: Sutras and Upsutras Addition in Vedic Maths: Without carrying, Dot Method 77, Subtraction in Vedic Maths: Nikhilam Navatashcaramam Dashatah (All from 9 last from 10) , Fraction -Addition and Subtraction	20%	6
Unit 2: "Miracle Multiplication and Excellent Division, Multiplication in Vedic Maths: Base Method (any two numbers up to three digits, Multiplication by Urdhva Tiryak Sutra, Miracle multiplication: Any three-digit number by series of l's and 9's, Division by Urdhva Tiryak Sutra (Vinculum method)"	20%	6
Unit 3: Lightening Squares and Rapid Cubes, Squares of any two-digit numbers: Base method, Square of numbers ending in 5: Ekadhikena Purvena Sutra, Easy square roots: Dwandwa Yoga (duplex) Sutra, Square root of 2: Baudhayana Shulbasutra, Cubing: Yavadunam Sutra	20%	6
Unit 4: Enlighten Algebra and Geometry, Factoring Quadratic equation: Anurupyena, Adyamadyenantyamanty Sutra, Concept of Baudhayana (Pythagoras) Theorem,	20%	6
Unit 5: Circling a square: Baudhayana Shulbasutra, Concept of pi: Baudhayana Shulbasutra, Concept angle (8) 0o, 300, 450, 600 and 900: Baudhayana number	20%	6

Instructional Method and Pedagogy: Chalk & board, group discussions, assignments, , Online materials, Practice examples

Course Outcomes:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to:		
CO1: **Apply** techniques of Vedic Mathematics to solve the problems of Addition and subtraction.	Remember, Understand, Apply	Explain, Use, Solve,
CO2: **Understand and Apply** techniques of Vedic Mathematics to solve the problems of Multiplication and Division.	Remember, Understand, Apply	, Identify, Use, Solve
CO3: **Apply** techniques of Vedic Mathematics to find squares, cubes, square roots and Cube roots.	Understand, Apply	Describe, Identify, Solve, Use, Find
CO4: **Understand and Apply** techniques of Vedic Mathematics to solve quadratic equation.	Remember, Apply	Describe, Use, Solve
CO5: **Understand** the rich heritage of mathematical temper of Ancient Indi.	Understand	classify, Explain, Identify, Use, solve.

Learning Resources

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
15	30	0	45	1	2	0	2

Course Pre-requisites	None
Course Category	Value Added Elective
Course focus	Promoting physical, mental, and emotional well-being through various activities and educational content
Rationale	Health and Physical Education (HPE) as a subject provides students with a comprehensive understanding of various aspects related to physical well-being, mental health, and the importance of leading a healthy lifestyle.
Course Revision/ Approval Date:	
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1. Remembering: □ Recall facts, terminology, and basic principles related to physical fitness, nutrition, safety guidelines, and health promotion. 2. Understanding: □ Explain the significance of physical activity for overall health and well- being. □ Interpret health-related information, such as nutrition labels or exercise prescriptions. **3. Applying:** □ Demonstrate proper techniques and skills in various physical activities, sports, and exercises. □ Apply safety guidelines and procedures in physical activity settings. □ Utilize knowledge of nutrition to plan balanced meals and snacks. **4. Analyzing:** □ Evaluate personal fitness levels and set goals for improvement. **5. Evaluating:** □ Assess the validity of fitness assessments and measurements. □ Evaluate personal health behaviors and make adjustments to improve overall wellness. **6. Creating:** □ Design personalized fitness plans or workout routines based

	on individual goals and preferences. □ Develop educational materials or presentations to promote health and fitness in the community. □ Create innovative strategies to overcome barriers to physical activity participation or healthy eating.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Physical Fitness, Wellness and Lifestyle - Meaning and Importance of physical fitness, wellness and lifestyle - Components of physical fitness, wellness and lifestyle	20%	3
Unit 2: Sports Nutrition - Concept of Balanced Diet and Nutrition - Macro and Micro Nutrients: Food sources and functions - Nutritive and Non- Nutritive Components of Diet	20%	3
Unit 3: Sports Training - Meaning and Concept of Sports Training - Principles of Sports Training - Warming up and limbering down - Skill, Technique and Style	20%	3
Unit 4: Management of Sports Injuries - Sports injuries: Classification (Soft Tissue Injuries – Abrasion, Contusion, Laceration, Incision, Sprain & Strain; - Bone & Joint Injuries - Dislocation, Fractures - Green Stick, Comminuted, Transverse, Oblique & Impacted)	20%	3
Unit 5: Test and Measurement in Sports - Define Test, Measurement and Evaluation - Importance of Test, Measurement and Evaluation in Sports - Calculation of BMI	20%	3

List Of Practical Tutorial	Weightage	Contact hours
Unit 1: Development of Strength :Lever- I	20%	5
Unit 2: Development of Speed: Level - I	20%	5
Unit 3: Development of Endurance: Level - I	20%	5
Unit 4 Development of Flexibility: Level - I	20%	5
Unit 5: Development of Coordination: Level - I	20%	5

Instructional Method and Pedagogy: Chalk & board, group discussions, assignments, , Online materials, Practice examples

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1: **Understand** the significance of physical activity for overall health and well-being. **Apply** safety guidelines and procedures in physical activity settings. **Create** innovative strategies to overcome barriers to physical activity participation or healthy eating.	Remember, Understand, Apply	Define, State, classify, Explain, Use, Examine
CO2: **Create** nutrition to plan balanced meals and snacks. **Understand** the significance of balanced diet for overall health and well-being.	Remember, Understand, Apply	Define, State, classify, Explain, Identify, Use
CO3: **Apply** the proper techniques and skills in various physical activities, sports, and exercises.	Understand, Apply	Describe, Identify, Solve,

Apply safety guidelines and procedures in physical activity settings.		Use, Find
CO4: **Recall** facts, terminology, and basic principles related to physical fitness, nutrition, safety guidelines, and health promotion.	Remember, Apply	Describe, Identify, Use, Solve, Find
CO5: **Assess** the validity of fitness assessments and measurements. **Evaluate** personal health behaviors and make adjustments to improve overall wellness.	Understand, Apply	classify, Explain, Identify, Use, Solve, Examine

COURSE CODE BSMO311 .	COURSE NAME MICROBIAL GENETICS	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental knowledge of concepts related to genes, genomes and chromosomes.
Course Category	Professional Core Course
Course focus	Employability
Rationale	To have an overview of genome organisation of bacteria. The subject also explains mechanisms of genetic exchange in bacteria and transposable elements present in prokaryotes.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** Understanding microbial genes, genomes, and gene expression. 2. **Analyze and Differentiate** Types of plasmids 3. **Understand** Microbial replication, transcription and translation. 4. **Illustrate and Discuss** Phage Genetics 5. **Evaluate and Apply** Knowledge of Transposable Elements

Course Content (Theory)	Weightage	Contact hours
Unit 1: Genome Organization E. coli, Saccharomyces, Tetrahymena Mutations and mutagenesis: Definition and types of Mutations; Physical and chemical mutagens; Molecular basis of mutations; Functional mutants (loss and gain of function mutants); Uses of mutations. Reversion and suppression: True revertant; Intra- and inter-genic suppression; Ames test; Mutator Genes	**20%**	**6**
Unit 2: Plasmids Types of plasmids – F plasmid, R Plasmids, colicin genic plasmids, Ti plasmids, linear plasmids, yeast- 2 µ plasmid, Plasmid replication and partitioning, Host range, plasmidincompatibility, plasmid amplification, Regulation of copy number, curing of plasmids.	**20%**	**6**
Unit 3: Mechanisms of Genetic Exchange No. of Transformation - Discovery, mechanism of natural competence. Conjugation - Discovery, mechanism, Hfr and F' strains, Interrupted mating technique and time of entry mapping. Transduction - Generalized transduction, specialized transduction, LFT & HFT lysates, Mapping by recombination and co-transduction of markers.	**20%**	**6**

Unit 4: Phage Genetics Features of T4 genetics, Genetic basis of lytic versus lysogenic switch of phage lambda	**20%**	**6**
Unit 5: Transposable elements Prokaryotic transposable elements – Insertion Sequences, composite and non-composite transposons, Replicative and Non replicative transposition, Mu transposon. Eukaryotic transposable elements - Yeast (Ty retrotransposon), Drosophila (P elements), Maize (Ac/Ds) Uses of transposons and transposition.	**20%**	**6**

List Of Practical	Weightage	Contact hours
1: Study the effect of chemical (HNO2) and physical (UV) mutagens on bacterial cells	**10%**	**4**
2: Study survival curve of bacteria after exposure to ultraviolet (UV) light	**10%**	**4**
3. Isolation of chromosomal DNA from E. Coli	**10%**	**4**
4. Agarose gel electrophoresis of genomic DNA and purity by spectrophotometry	**10%**	**4**
5. Isolation of Plasmid DNA from E. coli.	**10%**	**4**
6. Study different conformations of plasmid DNA through Agarose gel electrophoresis.	**10%**	**4**
7. Demonstration of Bacterial Conjugation	**10%**	**2**
8. Demonstration of Bacterial Transformation	**10%**	**2**
9. Demonstration of Bacterial Transduction	**10%**	**4**
10. Demonstration of AMES test	**10%**	**4**

Instructional Methodand Pedagogy: (Max. 100 words)

PPT, Demonstration, Video, Case study

Course Outcomes: After successful completion of the above course, students will be able:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	To understanding Genome Structure and Mutation Mechanisms	Remember, understand	Explain, Describe, Discuss, Recall,
CO2	To gain knowledge of Plasmid Types and Functionslearn the processes behind mutations and other genetic changes	knowledge	Apply, Practice, Interpret, Select, Correlate
CO3	To understand and apply the mechanisms of Genetic Exchange and Mapping Techniques	Understand, apply, Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	To learn genetic Basis of Phage Lifecycle Decisions	Remember, understand	Construct, Develop, Produce
CO5	To gain insights into prokaryotic and eukaryotic transposable elements	Understand	Explain, Describe

COURSE CODE BSMO312 .	COURSE NAME INTRODUCTION TO MICROBIOLOGY AND MICROBIAL DIVERSITY	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental knowledge of concepts related to microbiology
Course Category	Major
Course focus	Employability
Rationale	To have an overview and understanding of microbiology and microbial diversity. The subject also explains the life cycle and industrial importance of microorganisms.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** the History of Microbiology 2. **Analyze** different types of microorganisms 3. **Understand** about algae and their life cycle 4. **Apply** the importance of fungi. 5. **Explain** the characteristics of protozoa

Course Content (Theory)	Weightage	Contact hours
Unit 1: History of Development of Microbiology Development of microbiology as a discipline, Spontaneous generation vs. biogenesis. Noteworthy Contributions of Scientists. Role of microorganisms in fermentation, Germ theory of disease, Development of various microbiological techniques and golden era of microbiology, Development of the field of soil microbiology and important contributions. Establishment of fields of medical microbiology and immunology through notable contributions.	**20%**	**6**
Unit 2 Diversity of Microbial World **A. Systems of classification:** Binomial Nomenclature, Whittaker's five kingdom and Carl Woese's three kingdom classification systems and their utility. Difference between prokaryotic and eukaryotic microorganisms **B. General characteristics of different groups:** Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Algae, Fungi and Protozoa) with emphasis on distribution and occurrence, morphology, mode of reproduction and economic importance.	**20%**	**6**

Unit 3 Algae History of phycology with emphasis on contributions of Indian scientists; General characteristics of algae including occurrence, thallus organization, algae cell ultra structure, pigments, flagella, eyespot food reserves and vegetative, asexual and sexual reproduction. Different types of life cycles in algae with suitable examples: Haplobiontic, Haplontic, Diplontic, Diplobiontic and Diplohaplontic life cycles. Applications of algae in agriculture, industry, environment and food.	**20%**	**6**
Unit 4: Fungi Historical developments in the field of Mycology including significant contributions of eminent mycologists. General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra- structure, thallus organization and aggregation, fungal wall structure and synthesis, asexual reproduction, sexual reproduction, heterokaryosis, heterothallism and parasexual mechanism. Economic importance of fungi with examples in agriculture, environment, Industry, medicine, food, biodeterioration and mycotoxins.	**20%**	**6**
Unit 5: Protozoa General characteristics with special reference to Amoeba, Paramecium, Plasmodium, Leishmania and Giardia An overview of Scope of Microbiology	**20%**	**6**

List Of Practical	**Weightage**	**Contact hours**
1: Preparation of various media, sterilization and testing for sterility	**10%**	**2**
2: Study of Air microflora	**10%**	**4**
3: Preparation of Winogredsky's column and study of different groups	**12%**	**4**
4. Study of Spirogyra and Chlamydomonas, Volvox using temporary Mounts	**12%**	**4**
5. Growth on Sabouraud's agar / PDA and wet mount of fungus	**10%**	**4**
6. Study of Rhizopus, Penicillium, Aspergillus using temporary mounts	**12%**	**4**
7. Study of the following protozoans using permanent mounts/photographs: Amoeba, Entamoeba, Paramecium and Plasmodium	**36%**	**12**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, PPT, Demonstration, Video, Case studies

Course Objectives: **After successful completion of the above course, students will be able to:**	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
CO1 Describe Key Historical Developments in Microbiology	Remember	Explain, Describe, Discuss, Recall, Locate

CO2	Classify and Differentiate Microorganisms	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Analyze and Explain the Characteristics and Applications of Algae	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Evaluate the Importance and Characteristics of Fungi	Evaluate	Construct, Develop, Produce
CO5	Describe and Interpret the General Characteristics of Protozoa	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMO313 .	COURSE NAME BACTERIOLOGY	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental concepts of microbiology.
Course Category	Major
Course focus	Employability
Rationale	To have an overview of bacterial systematics and classification. The subject also explains the culture methods and techniques used in microbiology for better understanding of bacterial morphology.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** To recognize, identify and differentiate the internal and external structures of bacterial cells. 2. **Apply** To gain understanding of cultivation, preservation and control of bacteria. 3. **Analyses** To develop basic skills necessary to work with bacterial strains. 4. **Create** To know general techniques for isolation of pure cultures of bacteria. 5. **Understand** To identify categories of bacteria and analyze their classification and diversity.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Cell organization Cell size, shape and arrangement, glycocalyx, capsule, flagella, endo flagella, fimbriae and pili. Cell-wall: Composition and detailed structure of Archaebacterial cell wall and eubacterial cell wall, Gram and acid-fast staining mechanisms, lipopolysaccharide (LPS), spheroplasts, protoplasts, and L-forms. Effect of antibiotics and enzymes on the cell wall. Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes. Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid, chromosome and plasmids Endospore: Structure, formation, stages of sporulation.	**20%**	**6**
Unit 2: Growth, nutrition and Reproduction in Bacteria Nutritional requirements in bacteria and nutritional categories; Culture media and its types. Physical methods of microbial control. Chemical methods of microbial control. disinfectants, types and mode of action. Asexual methods of reproduction, logarithmic representation of bacterial populations, phases of growth, calculation of generation time and specific growth rate	**20%**	**6**

Unit 3: Bacteriological techniques & Microscopy Cultivation, maintenance and preservation/stocking of pure cultures; cultivation of anaerobic bacteria, and accessing nonculturable bacteria. Bright Field Microscope, Dark Field Microscope, Phase Contrast Microscope, Fluorescence Microscope, Confocal microscopy, Scanning and Transmission Electron Microscope	**20%**	**6**
Unit 4: Bacterial Systematics Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences. Differences between eubacteria and archaebacteria	**20%**	**6**
Unit 5: Important archaeal and eubacterial groups Archaebacteria: General characteristics, Classification and phylogenetic overview. Eubacteria: Morphology, metabolism, ecological significance and economic importance of following groups: Gram Negative: Non proteobacteria: General characteristics and classification with suitable examples. Gram Positive: Low G+ C (Firmicutes): General characteristics with suitable examples High G+C (Actinobacteria): General characteristics with suitable examples. Cyanobacteria: An Introduction."	**20%**	**6**

List Of Practical	**Weightage**	**Contact hours**
1: Study of Bacterial structure and morphology: Simple staining, Gram staining, Acid-fast staining (Demo), motility by hanging drop method	**20%**	**8**
2: Special staining: Capsule, endospore, metachromatic granule, flagella, Cell wal	**20%**	**8**
3. Measurement of cell size by micrometry method	**10%**	**4**
4. Pure culture study and biochemical characterization of bacteria (E. coli, S. aureus, Bacillus, Streptococci)	**10%**	**4**
5. Isolation and enumeration technique: Serial dilution, Standard Plate Count, Colony Forming Unit	**10%**	**4**
6. Preservation by Slant and Glycerol stock	**10%**	**4**
7. Isolation of anaerobic bacteria	**10%**	**4**
8. Preparation of various media (solid, semi solid, broth, synthetic, complex, defined, enriched media, differential and selective, and enrichment media)	**20%**	**8**
9. Isolation of Actinomycetes from soil (slide culture technique)	**10%**	**4**

Instructional Methodand Pedagogy:

Audiovisuals, Seminars, Quiz, PPT, Demonstration, Case studies

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Describe characteristics of bacterial cells, cell organelles, cell wall composition and various appendages like capsules, flagella or pili.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Describe the nutritional requirements of bacteria for growth.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Understand & apply microscopy techniques for identification of bacteria.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Remember & Understand bacterial systematics	Remember & understand	Construct, Develop, Produce
CO5	Develop knowledge and understanding of the bacteria which grow under extreme environments.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSCM316	COURSE NAME CHEMISTRY-I	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	30	0	60	2	1	0	3

Course Pre-requisites	Basic knowledge of physical and organic chemistry.
Course Category	Generic Elective
Course focus	Employability
Rationale	The concepts of physical chemistry help in understanding the Chemical Energetics Review of thermodynamics and the Laws of Thermodynamics and importance of Chemical Equilibrium. The fundamental concepts of organic chemistry help in understanding the chemistry of halogentaed hydrocarbons, phenols, ethers, epoxides, reactions of Carbonyl Compounds.
Course Revision/ Approval Date:	07/03/2024
Course Objectives **(As per Blooms' Taxonomy)**	To enable the student to: 1. To impart the knowledge of thermodynamics . 2. Concept of chemical equilibrium and ionic equilibria. 3. To understand basic organic chemistry reactions. 4. Detailed explanation of preparation and reactions of alkyl and aryl halides. 5. Preparation of alcohols and phenols and the reactions involving them. 6. Knowledge of preparation of ethers and different types of reactions.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Chemical Energetics Review of thermodynamics and the Laws of Thermodynamics (1st, 2nd & 3rd). Important principles and definitions of thermochemistry. Concept of standard state and standard enthalpies of formations, integral and differential enthalpies of solution and dilution. Calculation of bond energy, bond dissociation energy and resonance energy from thermochemical data. Kirchhoff's equation.	**20%**	**6**

Unit 2: Chemical Equilibrium Free energy change in a chemical reaction. Law of chemical equilibrium. Distinction between G and Go, Le Chatelier's principle. Relationships between Kp, Kc and Kx for reactions involving ideal gases	**20%**	**6**
Unit 3: Ionic Equilibria Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect. Salt hydrolysis: calculation of hydrolysis constant, degree of hydrolysis and pH for different salts. Buffer solutions.	**20%**	**6**
Unit 4: Alcohols and Phenols (Up to 5 Carbons) **Alcohols:** Preparation: Preparation of 1o, 2o and 3o alcohols: using Grignard reagent, Ester hydrolysis, Reduction of aldehydes, ketones, carboxylic acid and esters. Reactions: With sodium, HX (Lucas test), esterification, oxidation (with PCC, alk. KMnO4, acidic dichromate, conc. HNO3). **Phenols:** (Phenol case) Preparation: Cumene hydroperoxide method, from diazonium salts. Reactions: Electrophilic substitution: Nitration, halogenation and sulphonation. Reimer- Tiemann Reaction, Gattermann-Koch Reaction, Houben–Hoesch Condensation, Schotten Baumann Reaction	**20%**	**6**
Unit 5: Ethers, Aldehydes and ketones (aliphatic and aromatic) Cleavage of ethers with HI. Aldehydes and ketones (Formaldehyde, acetaldehyde, acetone and benzaldehyde) Preparation: from acid chlorides and from nitriles. Reactions – Reaction with HCN, ROH, NaHSO3, NH2-G derivatives. Iodoform test. Aldol Condensation, Cannizzaro's reaction, Wittig reaction, Benzoin condensation. Clemensen reduction and Wolff Kishner reduction. MeerweinPondorff Verley reduction.	**20%**	**6**

Instructional Methodand Pedagogy:

PPT, Demonstration, Video, Case study

List Of Practical	Weightage	Contact hours
Based on Unit 1 - 5		

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: **CO1:** Interpret the Laws of thermodynamics.	Understanding	Describe
CO2: Explain the free energy changes during chemical equilibria.	Understandand Apply	Explain and examine
CO3: Recognise the fundamentals of Organic chemistry, electrophilic and nucleophilic reactions.	Understand and Apply	Explain and examine
CO4: Explain the properties, preparation and reactions of alcohols and phenols	Remember and Understand	Define and explain
CO5: Explain the different types of reactions of aldehydes and ketones.	Understanding	Classify and Explain

COURSE CODE BSMA316	COURSE NAME MATHEMATICS-III	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	30	0	60	2	1	0	3

Course Pre-requisites	Basic knowledge of algebra and calculus. Basic knowledge of derivatives and integration.
Course Category	Discipline Specific elective course
Course focus	Skill development
Rationale	This course involves solving the system of linear equations, approximation of root of non-linear equation. Students also learn interpolation methods for equi-distant and non equi-distant data. Also they develop the skill to find numerical integration and differentiation and techniques to solve IVP.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1: **Solve:** Make the students familiarise with the ways of solving complicated mathematical problems numerically 2:**Understand:** To help them become familiar with MATLAB and other convenient numerical software such as Microsoft Excel and with simple programming 3: **Recognize, Find:** Obtain numerical solutions to non-algebraic equations and system of linear equations. 4: **Understand:** Describe and understand of the several errors and approximation in numerical methods 5: **Understand, Find:** Understanding of several available Solution techniques for differential Equations in One Variable. Study of Curve Fitting and Interpolation. **Blooms' Taxonomy word** should be highlighted

Course Content (Theory)	Weightage	Contact hours
Unit 1: **Solution of Algebraic and Transcendental Equations:** Bisection, False position, Newton Raphson Method, Secant Method. Solution using Matlab	**20%**	**6**
Unit 2: **Solution of system of Linear Equations:** LU decomposition method, Gauss Jacobi Method, Gauss Seidel method. Solution using Matlab	**20%**	**6**
Unit 3: **Interpolation:** Newton's forward and backward interpolation, Newton's divided difference interpolating polynomials, Lagrange Interpolating polynomials. Solution using Matlab.	**20%**	**6**
Unit 4: **Numerical Integration:** Trapezoidal rule, Simpson's one third and 3/8th rule. Solution using Matlab **Curve Fittings:** General Linear Least Squares, Fitting of quadratic and exponential curves. Solution using Matlab.	**20%**	**6**
Unit 5:	**20%**	**6**

Numerical methods for Solution of ordinary differential equation: Euler's method, Modified Euler's Method, Runge Kutta forth ordered method, Solution using Matlab.		

List Of Practical	Weightage	Contact hours
1: Introduction to MATLAB, Matrix algebra, functions	**7%**	**2**
2: Loops: For, if else , while Programme for Bisection Method	**7%**	**2**
3: Programme for Regula-falsi and Secant Method	**7%**	**2**
4: Programme for Newton-Raphson's Method	**7%**	**2**
5: Programme for Difference Table	**7%**	**2**

COURSE CODE BSPY317	COURSE NAME PHYSICS-II	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
30	30	0	60	2	1	0	3

Course Pre-requisites	Understanding of basic physics up to school level (10+2 level).
Course Category	Generic Elective
Course focus	Employability
Rationale	To gain basic knowledge of physics.
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	To enable the student to: 1:**Understand** the physical significance of mathematical operations. 2: **Employ** the knowledge of electrostatics in daily life applications. 3: **Understand** the basics of magnetostatics and its applications. 4: **Remember** the laws of thermodynamics and their **applications.** 5: **Explain** the thermodynamic potentials and transport properties.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Vector Analysis Scalar and Vector product, gradient, divergence, Curl and their significance, Vector Integration, Line, surface and volume integrals of Vector fields, Gauss-divergence theorem and Stoke's theorem of vectors	**12%**	**6**
Unit 2: **Electrostatics** Electrostatic Field, Electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem - Electric field due to a point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor. Electric potential as a line integral of electric field, electric potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel-plate, spherical and cylindrical condenser. Energy per unit volume in the electrostatic field. Dielectric medium, Polarization, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric	**23%**	**14**
Unit 3: Magnetostatics Biot-Savart's law and its applications - straight conductor, circular coil,	**23%**	**14**

solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law. Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferromagnetic materials. Electromagnetic Induction: Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in the magnetic field.		
Unit 4: : Laws of Thermodynamics Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamic Processes, Applications of First Law: General Relation between CP and CV, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law and Entropy, Carnot's cycle & theorem, Entropy changes in reversible & irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics, Unattainability of absolute zero	**22%**	**14**
Unit 5: Thermodynamic Potentials Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thomson Effect, Clausius-Clapeyron Equation, Expressions for (CP – CV), CP/CV, TdS equations. Kinetic Theory of Gases: Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (without derivation of expressions) and its applications to specific heat of gases; mono-atomic and diatomic gases.	**20%**	**12**

List Of Practical	Weightage	Contact hours
1: **Study** of working and characteristics of a Van de Graff generator	**8**	**3**
2:**Determination** of the magnetic moment of a given magnet using magnetometer at Gauss A and Gauss B position using Deflection magnetometer.	**14**	**4**
3: **Determination** of the ratio of magnetic moment of the given bar magnets using Vibration magnetometer.	**14**	**4**
4: To **study** the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph and **calculate** the radius of the coil using given laboratory setup.	**14**	**4**
5: To **verify** Stefan-Boltzmann law of thermal radiation by electrical method.	**8**	**3**
6: To **verify** the relation between the thermal emfs of a thermocouple and temperature difference between two hot junctions and verify Seebeck Effect.	**14**	**4**
7: **Determine** the molar heat capacities of air at constant volume Cv and at constant pressure Cp.	**14**	**4**
8: To **determine** the Coefficient of Thermal Conductivity of Copper by Searle's Method.	**14**	**4**

Instructional Methodand Pedagogy: (Max. 100 words)
PPT, Demonstration, Video, Case study

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successfulcompletion of the above course, students will be able to: **CO1 Describe** the physical significance of mathematical operations.	Understanding	Describe
CO2 Employ the knowledge of electrostatics in daily life applications.	Understandand Apply	Explain and examine
CO3 Explain the use of magnetostatics in various applications	Understandand Apply	Explain and examine
CO4 Interpret the laws of thermodynamics and **understand** its applications	Remember and Understand	Define and explain
CO5 Explain the thermodynamic potentials and transport properties	Understanding	Classify and Explain

COURSE CODE AECC301	COURSE NAME ENTREPRENEURSHIP DEVELOPMENT	SEMESTER III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	Knowledge and skills of entrepreneurship.
Course Category	Ability Enhancement Compulsory Course
Course focus	Entrepreneurship
Rationale	Entrepreneurs have been instrumental in spurring social change and improving the way people live and work. They help raise the standard of living for everyone by creating jobs and making products safer, less expensive, and more functional.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1: Students will develop skills for evaluating, articulating, refining, and pitching a new product or service offering 2: Identify the elements of success of entrepreneurial ventures 3: Analyze Feasibility of the project (Financial and Non-Financial) and interpret business plan. 4: Demonstrate and present successful work, collaboration and division of tasks in a multidisciplinary and multicultural team. 5: Demonstrate understanding and application of the tools necessary to create sustainable and viable Businesses.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Entrepreneurship Concept, knowledge and skills requirement; characteristic of successful entrepreneurs; role of entrepreneurship in economic development; entrepreneurship process; factors impacting mergence of entrepreneurship; managerial vs. entrepreneurial approach and emergence of entrepreneurship. Entrepreneurial Motivation.	**20%**	**6**

Unit 2: Creativity and Entrepreneurship Steps in Creativity; Product Design & Influencing Factors (Legal, Ethical & Environmental); Generating business idea –sources of new ideas, methods of generating ideas, creative problem solving, opportunity recognition; environmental scanning, competitor and industry analysis.	**20%**	**6**
Unit 3: Feasibility Study (Non-financial Aspects) Market feasibility, Technical feasibility, operational feasibility, Legal feasibility, Human Resource Feasibility, Supply Feasibility.	**20%**	**6**
Unit 4:Feasibility Study (financial Aspects) Cost classification- Fixed vs. Variable; Cost Determination- Material, Labour, Overheads; Product Profitability- Concepts of Break-even, Margin of Safety, Angle of Incidence, Key-factor, Profit-Volume ratio; Balance Sheet & Profit & Loss Account- Concepts & Structure; Budgeting; Financing Schemes from Government, specially schemes for women; Venture Capital & Angel Investing	**20%**	**6**
Unit 5: Detailed Project Report & Business Plan Project Report- components; Preparation of Business Plan; Pitching the Business Plan, Attracting Angel Investors. (A group of THREE students will prepare a DPR, and Business Plan on selected product or service in the course as a Project/Assignment.	**20%**	**6**

Course Outcomes:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to:		
CO1 Students will develop skills for evaluating, articulating, refining, and pitching a new product or service offering.	Evaluate	Define,Classify and describe
CO2 Identify the elements of success of entrepreneurial ventures	Apply and Understand	Define,Classify, Describe,Demostrate and Examine
CO3 Analyze Feasibility of the project (Financial and Non-Financial) and interpret business plan	Analyse	Define,Classify, Describe,Demostrate and Examine
CO4 Demonstrate and present successful work, collaboration and division of tasks in a multidisciplinary and multicultural team.	Create and Understand	Define,Classify, Describe,Demostrate and Examine
CO5: Demonstrate understanding and application of the tools necessary to create sustainable and viable Businesses	Create and Understand	Define,Describe and Demostrate

COURSE CODE CBCS303	COURSE NAME WORLD GEOGRAPHY	L	T	P	C
		2	0	0	2
Total Credits: 2	**Total Hours in semester: 30**	**Total Marks: 100**			
1	**Course Pre-requisites: Zeal to learn the subject**				
2	**Course Category: Skill Enhancement Courses.**				
3	**Course Revision/ Approval Date:**				
4	**Course Objectives :**				
4.1 To give students basic knowledge about geography and general geographic features.					
4.2 To enable students to understand physical geography and its impact on human life.					
4.3 To enable students to social geography and its impact on country.					
4.4 To enable students to economical geography and its impact on country.					
4.5 To provide students competitive advantage in competitive examinations for civil services.					

Course Content	Weightage	Contact hours	Pedagogy
Unit 1: **General Geography:** Earth in Solar system, Motion of the Earth, Concept of time, Season, Internal Structure of the Earth, Major land forms and their features. Atmosphere-structure and composition, elements and factors of Climate, Air masses and Fronts, atmospheric disturbances, climate change. Oceans: Physical, chemical and biological characteristics, Hydro-logical Disasters, Marine and Continental resources.	20%	06	Power Point Presentation/ Chalk/ Duster
Unit 2: Physical: World, India and Gujarat : Major physical divisions, Earthquakes, landslides, Natural drainage, climatic changes and regions, Monsoon, Natural Vegetation, Parks and Sanctuaries, Major Soil types, Rocks and Minerals.	20%	06	Power Point Presentation/ Chalk/ Duster
Unit 3: Social: World, India and Gujarat : distribution, density, growth, Sex-ratio, Literacy, Occupational Structure, SC and ST Population, Rural-Urban components, Racial, tribal, religious and linguistic groups, urbanization, migration and metropolitan regions.	20%	06	Power Point Presentation/ Chalk/ Duster

Unit 4: Economic: World, India and Gujarat: Major sectors of economy, Agriculture, Industry and Services, their salient features. Basic Industries-Agro, mineral, forest, fuel and manpower based Industries, Transport and Trade, Pattern and Issues.	20%	06	Power Point Presentation/ Chalk/ Duster
Unit 5: World Maps: Types of Maps and its significance, Use of Maps and its applications	20%	06	Hands on activities/ Power Point Presentation/ Chalk/ Duster

Learning Resources	
1.	Textbooks: 1. D R Khullar, Physical, Human and Economic Geography for Civil Services Examination, GPK Publications
2.	Reference Books: 1. Majid Hussain, World Geography, KP Publications
3.	Journals & Periodicals: 1. The Geographical Journal, Royal Geographic Society
5.	Other Electronic Resources: 1. NAVIC 2. BHUVAN 3. Google Map

Evaluation Scheme	**Total Marks**	
Mid semester Marks	30	
End Semester Marks	50	
Continuous Evaluation Marks	Attendance	5 marks
	Quiz	5 marks
	Skill enhancement activities / job preparations	5 marks
	Presentation/ miscellaneous activities	5 marks
	1. Able to understand basic knowledge about geography and general geographic features.	

Course Outcomes	2. Able to physical geography and its impact on human life.
	3. Understand social geography and its impact on country.
	4. Will get knowledge about economical geography and its impact on country.
	5. Understanding of maps and its use in specific applications.

COURSE CODE CBCS303	COURSE NAME App Development Programming	L	T	P	C
		2	0	0	2
Total Credits:2	**Total Hours in semester : 30**	**Total Marks:100**			
1	**Course Pre-requisites: Prior knowledge required of Object Oriented Programming Concepts (C++ or Java)**				
2	**Course Category:** **Engineering Specific Elective**				
3	**Course Revision/ Approval Date:**				
4	**Course Objectives :**				
4.1 To facilitate students to understand android SDK					
4.2 To help students to gain a basic understanding of Android application development					
4.3 To inculcate working knowledge of Android Studio development tool					
4.4 To inculcate testing of application before deployment					
4.5 To use of common Android APIs					

Course Content	Weightage	Contact hours	Pedagogy
Unit 1: Introduction to Android **Theory:** The Android Platform, Android SDK, Eclipse Installation, Android Installation, Building you First Android application, Understanding Anatomy of Android Application, Android Manifest file.	20%	6	Computer Based Learning, Chalk – Talk, Presentation
Unit 2: Android Application Design Essentials **Theory:** Anatomy of an Android applications, Android terminologies, Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android Manifest File and its common settings, Using Intent Filter, Permissions.	20%	6	Computer based learning, Chalk – Talk, Presentation
Unit 3: Android User Interface Design Essentials **Theory:** User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation.	20%	6	Chalk – Talk, Presentation
Unit 4: Testing Android applications	20%	6	Computer

Theory: Publishing Android application, Using Android preferences, Managing Application resources in a hierarchy, working with different types of resources.			based learning, Chalk – Talk, Presentation
Unit 5: Using Common Android APIs **Theory:** Using Android Data and Storage APIs, Managing data using Sqlite, Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using Android Web APIs, Using Android Telephony APIs, Deploying Android Application to the World.	20%	6	Computer based learning, Chalk – Talk, Presentation

COURSE CODE CBCS312	COURSE NAME Project Management	L	T	P	C
		30	0	0	2
Total Credits:02	**Total Hours in semester: 30**	**Total Marks:100**			

1	Course Pre-requisites: Domain Knowledge of project making
2	Course Category: CBCS
3	Course Revision/ Approval Date:
4	Course Objectives :
1. To understand the importance of project management.	
2. To understand how the project will organize, plan.	
3. The project has to monitor and control the success of the project.	

Course Content	Weightage	Contact hours	Pedagogy
Unit 1: The world of Project Management 1. Definition of project, 2. Project Management Vs. General Management, 3. Three goals of project, The life cycle of projects	20%	5 Hours	Lecture
Unit 2 Project Planning 2. The contents of a project plan The planning process-overview	15%	5 Hours	Lecture/ Cases
Unit 3: Organizing the project 1. The PM's Roles 2. The PM's responsibility to the project, Selection of a Project Manager, 3. Project Management as a profession	15%	5 Hours	Lecture/ Cases / Role Playing
Unit 4: Budgeting the Project 1. Methods of budgeting, 2. Cost estimating, 3. Improving Cost Estimates, 4. Budget Uncertainty and risk management	30%	8 Hours	Quizzes/ Cases /
Unit 5 Monitoring and Controlling the Project 1. The plan-monitor-control cycle, 2. Data collection and reporting, 3. Earned value, 4. Project control, 5. Designing the control system,	20%	7 Hours	Cases Analysis and discussion

Learning Resources:	
1.	.Text Book: Project management: A systems approach to planning scheduling and controlling by Harlod Kerzner and Van Nostr and, John Wiley& Sons, 11thed., 2013, ISBN:978-1-118-02227-6.
2.	Reference Books: 1.Project Management by Samuel J. Mantel, Jr. , Jack R. Meredith, Scott M. Shafer, Margaret M.Sutton with M. R. Gopalan (WILEY-INDIA) 2. Project Management and Appraisal by Sitangshu Khatua (Oxford)
3.	News Paper 1. Economic Times 2. Business Standard

Evaluation Scheme	**Total Marks**	
Mid semester Marks	20 Marks	
End Semester Marks	40 Marks	
Continuous Evaluation Marks 40	Attendance	5 marks
	Quiz	5 marks
	Skill enhancement activities / case study	5 marks
	Presentation/ miscellaneous activities	5 marks
Course Outcomes	1. Design a solution to a business dilemma,	
	2. Develop strategies to initiate, plan, execute, monitor and control, and close projects in business environments.	
	3. Analyze and evaluate appropriate business strategies, practices, and theories.	

COURSE CODE CBCS210	COURSE NAME Research Methodology	L	T	P	C
		02	0	0	2
Total Credits:02	**Total Hours in semester: 30**	**Total Marks:100**			

1	Course Pre-requisites: Numerical Knowledge
2	Course Category: CBCS Generic Elective
3	Course Revision/ Approval Date: Academic Council meet
4	Course Objectives:
4.1 To equip the students with the basic understanding of the research methodology	
4.2 To understand the different types of research methods.	
4.3 To understand importance of systematic approach to problem solving	
4.4 To develop the ability to interpretation of research results and findings	

Course Content	Weightage	Contact hours	Pedagogy
Unit 1: Introduction 1. Objective, Types, and Methods 2. Process. Research Problem, 3. Concept of Research and Its Application in Various sectors.	15%	5 Hours	Lecture/ Class participation
Unit 2 Research Designs: 1.Understanding Research design 2.Qualitative 3.Quantitative Research	15%	5Hours	Lecture/ Cases
Unit 3: Scaling Techniques 1. Importance Measurement 2. Scaling Techniques 3. Measurement in Research, 4. Types of Measurement Scales	20%	5 Hours	Lecture/ / Cases / Role Playing
Unit 4: Data Collection 1. Primary and Secondary Methods of Data Collection – Surveys, Observation, Experimentation 2. Hypothesis testing, Descriptive Statistics	30%	8 Hours	Quizzes/ Cases /
Unit 5 Report Preparation Types and Layout of Research Report	20%	7 Hours	Cases Analysis and discussion

Learning Resources	
1.	Textbooks: Research Methodology, D. K. Bhattacharyya, Excel
2.	Reference Books: 1. Research Methodology for Management and social Science, Adithan Bhujange, Excel 2. 2.CR Kothari, Research Methodology
3.	Journals & Periodicals: 1. Journal of Indian Business Research 2. International Journal of Statistics and Analysis

Evaluation Scheme	Total Marks: 100	
Mid semester Marks	30 Marks	
End Semester Marks	50 Marks	
Continuous Evaluation Marks 20	Attendance	5 marks
	Quiz	5 marks
	Skill enhancement activities / case study	5 marks
	Presentation/ miscellaneous activities	5 marks
Course Outcomes	1 Understand problem and a types of problems	
	2. Gain exposure to globally accepted theories	
	3. Understand methodologies of conducting research

COURSE CODE BSMO411 .	COURSE NAME INDUSTRIAL MICROBIOLOGY	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental knowledge of industrial use of microorganisms.
Course Category	Major
Course focus	Employability
Rationale	To have an overview and understanding of industrially important microorganisms. The subject also explains the different types of fermentation processes, bioreactors and production of microbial products.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** the Basics of Industrial Microbiology and Fermentation Processes 2. **Understand** Types of Bioreactors and Fermentation Parameter Measurements Analyses To study microbial classification. 3. **Analyze** Techniques in Upstream and Downstream Processing 4. **Evaluate** Microbial Production of Industrial Products 5. **Apply** Methods for Enzyme Immobilization

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction to industrial microbiology and Fermentation Process Brief history and developments in industrial microbiology. Types of fermentation processes - Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch (eg. baker's yeast) and continuous fermentations.	**20%**	**6**
Unit 2: Types of bioreactors and measurement of fermentation parameters Components of a typical bioreactor. Types of bioreactors: Laboratory, pilot-scale and production fermenters, continuously stirred tank reactor, air-lift fermenter. Measurement and control of fermentation parameters: pH, temperature, dissolved oxygen, foaming and aeration.	**20%**	**6**
Unit 3: Upstream and Downstream processing **Upstream processing :** Sources of industrially important microbes and their isolation, preservation and maintenance methods. Crude and synthetic media: Molasses, corn-steep liquor, sulphite waste liquor, whey, yeast extract, soybean meal, peptone and tryptone. **Downstream processing:** Cell disruption by physical, chemical and biological methods. Membrane filtration and ultrafiltration, centrifugation, solvent-solvent extraction, precipitation, lyophilization and spray drying.	**20%**	**6**
Unit 4: Microbial production of industrial products Microorganisms, fermentation and recovery strategies: citric acid, ethanol, glutamic acid, Vitamin B12. wine, beer, antibiotics (penicillin, streptomycin). Enzymes: amylase, protease, lipase, glucose isomerase and glucose oxidase.	**20%**	**6**

Unit 5: Enzyme immobilization Methods of immobilization, advantages and applications of immobilization, large scale applications of immobilized enzymes (glucose isomerase and penicillin acylase).	**20%**	**6**

List Of Practical	Weightage	Contact hours
1. Screening and Isolation of industrially important microorganism from natural resource (enzyme/ antibiotic/organic acid producer)	**10%**	**4**
2. Calculation of thermal death point (TDP) of a microbial sample.	**10%**	**4**
3. Study parts of bioreactor and its design	**10%**	**4**
4. Measure the dissolve oxygen in the fermentation broth	**10%**	**4**
5. Preparation of Inoculum (cell count of yeast cell using haemocytometer)	**10%**	**4**
6. Preparation of fermentation media	**10%**	**4**
7. Product recovery and Purification	**10%**	**4**
8. Antibiotic Assay (Well and Disk method)	**10%**	**4**
9. Enzyme Immobilization	**10%**	**4**
10. Production and Analysis of Ethanol	**10%**	**4**
11. Production and Analysis of amylase	**10%**	**4**

Instructional Method and Pedagogy:

Group discussion, Chalk and board, Audiovisuals, Seminars, Quiz, PPT, Demonstration, Case studies

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Explain the Fundamentals of Industrial Microbiology and Fermentation Processes	Remember	Knowledge and Comprehension
CO2	Analyze and Classify Different Types of Bioreactors	Analyze	Apply, Practice, Interpret, Select, Correlate
CO3	Evaluate Upstream and Downstream Processing Techniques	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Develop Strategies for Microbial Production of Industrial Products	Create	Construct, Develop, Produce
CO5	Apply Techniques for Enzyme Immobilization and Evaluate Their Industrial Applications	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMO412 .	COURSE NAME RECOMBINANT DNA TECHNOLOGY	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental knowledge of genes, genomes and genetic engineering.
Course Category	Professional Core Course
Course focus	Employability
Rationale	This course equips students with essential knowledge and practical skills in molecular tools, PCR, genetic engineering, protein engineering, and plant genetic engineering, preparing them for applications in biotechnology and research.
Course Revision/ Approval Date:	07/03/2024
Course Objectives **(As per Blooms' Taxonomy)**	1. **Remember & Understand** Molecular Tools and Applications 2. **Apply** Principles of PCR and Genetic Mapping 3. **Analyses** Genetic Engineering Techniques and Therapeutic Applications 4. **Create** Model organisms in recombinant DNA technology 5. **Create** Genetic Engineering Strategies in Plants

Course Content (Theory)	Weightage	Contact hours
Unit 1: Molecular tools and applications Molecular tools and applications- restriction enzymes, ligases, polymerases, alkaline phosphatase. Episomes, Plasmids and other cloning vectors (Bacteriophage-derived vectors, artificial chromosomes), Microinjection, Electroporation, Ultrasonication.	**20%**	**6**
Unit 2: Polymersae chain reaction Principle and applications of Polymerase chain reaction (PCR), primer-design, and RT- (Reverse transcription) PCR. Restriction and modification system, restriction mapping. Southern and Northern hybridization. Preparation and comparison of Genomic and cDNA library, screening of recombinants, reverse transcription.	**20%**	**6**

Unit 3: Genetic Engineering and Therapeutic Applications Genome mapping, DNA fingerprinting, Applications of Genetic Engineering in animals: Production and applications of transgenic mice, role of ES cells in gene targeting in mice. Therapeutic products produced by genetic engineeringblood proteins, human hormones, immune modulators and vaccines (one example each).	**20%**	**6**
Unit 4: Advanced Techniques in Protein Engineering Random and site-directed mutagenesis: Primer extension and PCR based methods of site directed mutagenesis, Random mutagenesis, Gene shuffling, production of chimeric proteins, Protein engineering concepts and examples (any two).	**20%**	**6**
Unit 5: Genetic engineering in plants Use of Agrobacterium tumefaciens and A.rhizogenes, Ti plasmids, Strategies for gene transfer to plant cells, Direct DNA transfer to plants, Gene targeting in plants, Use of plant viruses as episomal expression vectors.	**20%**	**6**

List Of Practical	Weightage	Contact hours
1. Isolation of chromosomal DNA from E. coli	**20%**	**12**
2. Plasmid DNA isolation		
3. Qualitative and quantitative analysis of DNA using spectrophotometer	**20%**	**12**
4. Demonstration of PCR		
5. Making competent cells		
6. Transformation of competent cells		
7. Restriction digestion of DNA	**20%**	**12**
8. Demonstration of Agarose gel electrophoresis.	**20%**	**12**
9. Isolation of chromosomal DNA from plant cells.	**20%**	**12**

Instructional Method and Pedagogy: Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Objectives:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1 Understand the Principles and Applications of Molecular Tools in Genetic Engineering	Understand and Analyse	Explain, Describe, Discuss, Recall,
CO2 Apply PCR Techniques and Genetic Analysis Methods	Apply and create	Apply, Practice, Interpret, Select, Correlate
CO3 Evaluate Genetic Engineering Applications and Therapeutic Uses	evaluate	Compare, Classify, Select, Investigate
CO4 Analyze Advanced Techniques in Protein Engineering	Analyze	Construct, Develop, Produce
CO5 Apply Genetic Engineering Principles to Plant Biotechnology	Create	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMO413 .	COURSE NAME MICROBIAL PHYSIOLOGY & METABOLISM	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
45	30	0	75	3	1	0	4

Course Pre-requisites	Fundamental concepts of microbial growth, nutrition and biochemistry.
Course Category	Professional Core Course
Course focus	Employability
Rationale	To have an overview of microbial growth and physiological processes. The subject also explains the nutrient uptake and transport mechanism in microorganisms.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** To learn about the major features of growth and metabolism of microorganisms, and microbial relationships. 2. **Apply** To study determination of growth curve environmental influence on the microbial growth. 3. **Analyses** To study the biology and evolution of microorganisms and their interactions with the environment. 4. **Create** To learn about and primary and secondary metabolism. 5. **Understand** To explore about energy source for microorganisms and relationship between metabolism and energy source.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microbial Growth and Effect of Environment on Microbial Growth. Definitions of growth, measurement of microbial growth, Batch culture, Continuous culture, generation time and specific growth rate, synchronous growth, diauxic growth curve. Microbial growth in response to environmental conditions (Temperature, pH, solute and water activity, Oxygen and pressure). Microbial growth in response to nutrition and energy sources.	**20%**	**6**
Unit 2: Nutrient uptake and Transport Passive and facilitated diffusion. Primary and secondary active transport, concept of uniport, symport and antiport. Group translocation, Iron uptake.	**20%**	**6**

Unit 3: Chemoheterotrophic Metabolism- Aerobic Respiration. Concept of aerobic respiration, Concept of anaerobic respiration and fermentation. Sugar degradation pathways. Electron transport chain: components of respiratory chain, comparison of mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers and inhibitors. Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/Nitrite and nitrate/ammonia respiration; fermentative nitrate reduction). Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways	**25%**	**8**
Unit 4: Chemoheterotrophic Metabolism- Anaerobic respiration and fermentation Introduction to aerobic and anaerobic chemolithotrophy with an example each. Hydrogen oxidation (definition and reaction) and methanogenesis (definition and reaction) Introduction to phototrophic metabolism - groups of phototrophic microorganisms, anoxygenic vs. Oxygenic photosynthesis with reference to photosynthesis in green bacteria, purple bacteria and cyanobacteria.	**20%**	**6**
Unit 5: Nitrogen Metabolism - an overview Introduction to biological nitrogen fixation Ammonia assimilation Assimilatory nitrate reduction, dissimilatory nitrate reduction, denitrification.	**20%**	**6**

List Of Practical	Weightage	Contact hours
1. Study and plot the growth curve of E. coli by turbidometry and standard plate count methods.	**10%**	**4**
2. Calculations of generation time and specific growth rate of bacteria from the graph plotted with the given data.	**10%**	**4**
3. Diauxic growth curve of E. Coli (Lac Operon)	**10%**	**4**
4. Effect of desiccation/drying on the growth of bacteria	**10%**	**4**
5. Effect of temperature on growth of E. coli and S. aureus	**10%**	**4**
6. Effect of pH on growth of E. coli and S. aureus	**10%**	**4**
7. Effect of Temperature, pH, concentration of salt (NaCl) and Sugar (glucose) on growth of E. coli and S. aureus (Turbidimetry)	**10%**	**4**
8. Effect of carbon and nitrogen sources on growth of E. coli.	**10%**	**4**
9. Effect of salt on growth of E. coli.	**10%**	**4**
10. Single Enzyme test: (Catalase test, Coagulase test, Oxidase test, Indole test, ONPG (O-nitrophenyl-beta-D-galactopyranoside), Urease	**10%**	**4**
11. Metabolic Pathway: Carbohydrate fermentation/ Oxidation- fermentation test (Oxidative fermentative -medium -CDC test, -Carbohydrate fermentation on TSI -MR/VP test	**10%**	**4**

12. Decarboxylase/Di hydrolase test Deaminase reaction test (Phenylalanine agar) Lysine decarboxylase test Citrate Utilization (Simmons citrate agar) Nitrate reduction test Gelatin liquification test		

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments. Practical exercises are designed to understand the theory as taught in classroom.

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Describing the growth characteristics of the microorganisms capable of growing under unusual environmental condition of temperature, oxygen, and solute and water activity	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Describing the growth characteristics of the microorganisms capable of growing under unusual environmental condition of temperature, oxygen, and solute and water activity	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Differentiating concepts of aerobic and anaerobic respiration and how these are manifested in the form of different metabolic pathways in microorganisms	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	Differentiating concepts of aerobic and anaerobic respiration and how these are manifested in the form of different metabolic pathways in microorganisms	Create	Construct, Develop, Produce
CO5	Describing the growth characteristics of the microorganisms which require different nutrient for growth and the associated mechanisms of energy generation for their survival like autotrophs, heterotrophs, chemolithoautotrophs etc	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSCM415	COURSE NAME CHEMISTRY II	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	30	00	60	2	1	00	3

Course Pre-requisites	Basic knowledge of physical and organic chemistry
Course Category	Generic elective
Course focus	Employability
Rationale	Fusion of various sciences is occurring at a rapid pace. Biochemists and microbiologists need indepth knowledge in Chemistry. To fill this gap the course, namely, Chemistry II, is inducted into the curriculum.
Course Revision/ Approval Date:	14/03/2023
Course Objectives **(As per Blooms' Taxonomy)**	**1.** To impart the knowledge of solution state and the laws governing thereof. **2.** To equip the students with the indepth knowledge of Phase equilibria and their industrial relevance **3.** To make the students skilled in operating electroanalytical devices, like, pH meter, potentiometer and conductometery by imparting fundamental knowledge of electrochemistry **4.** To impart knowledge pertaining to carboxylic acids, Amines and diazonium Salts. **5.** To equip the students with knowledge of amino acids, peptides and proteins and the properties and conversions thereof.

Course Content (Theory)	Weightage %	Contact hours
Unit 1: Solutions Thermodynamics of ideal solutions Ideal solutions and Raoult's law, deviations from Raoult's law – nonideal solutions. Vapour pressure-composition and temperature composition curves of ideal and non-ideal solutions. Distillation of solutions. Lever rule. Azeotropes. Partial miscibility of liquids: Critical solution temperature; effect of impurity on partial miscibility of liquids. Immiscibility of liquids- Principle of steam distillation. Nernst distribution law and its applications, solvent extraction.	**20**	**6**

Unit 2: Phase Equilibrium Phases, components and degrees of freedom of a system, criteria of phase equilibrium. Gibbs Phase Rule and its thermodynamic derivation. Derivation of Clapeyron- Clausius equation and its importance in phase equilibria. Phase diagrams of one-component systems and two component systems	**20**	**6**
Unit 3: Conductance & Conductivity Introduction, Equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes. Kohlrausch law of independent migration of ions. Transference number and its experimental determination using Hittorf and Moving boundary methods. Ionic mobility. Applications of conductance measurements: determination of degree of ionization of weak electrolyte, solubility and solubility products of sparingly soluble salts, ionic product of water, hydrolysis constant of a salt. Conductometric titrations.	**20**	**6**
Unit 4: Carboxylic acids and their derivatives (aliphatic and aromatic) Preparation: Acidic and Alkaline hydrolysis of esters. Reactions: Hell – Volhard - Zelinsky Reaction. Acid chlorides, Anhydrides, Esters and Amides from acids and their interconversion. Reactions: Comparative study of nucleophilicity of acyl derivatives. Reformatsky Reaction, Perkin condensation. **Amines and Diazonium Salts Amines (Aliphatic and Aromatic): (Upto 5 carbons)** Preparation: from alkyl halides, Gabriel's Phthalimide synthesis, Hofmann Bromamide reaction. Reactions: Hofmann vs. Saytzeff elimination, Carbylamine test, Hinsberg test, with HNO_2, Schotten – Baumann Reaction. Electrophilic substitution (case aniline): nitration, bromination, sulphonation. Diazonium salts: Preparation: from aromatic amines. Reactions: conversion to benzene, phenol, dyes.	**20**	**12**
Unit 5: Amino Acids, Peptides and Proteins	**20**	**12**

Preparation of Amino Acids: Strecker synthesis using Gabriel's phthalimide synthesis. Isoelectric point and Electrophoresis. Reactions of Amino acids: ester of –COOH group, acetylation of –NH2 group, complexation with Cu2+ ions, ninhydrin test. Overview of Primary, Secondary, Tertiary and Quaternary Structure of proteins. Determination of Primary structure of Peptides by N-terminal and C–terminal. Carbohydrates: Classification, and General Properties, Glucose and Fructose (open chain and cyclic structure), Determination of configuration of monosaccharides, absolute configuration of Glucose and Fructose, ascending and descending in monosaccharides. Structure of disacharrides and polysacharrides.		

List of Practicals	Weightage	Contact hours
1. To determine the relative viscosity of ethyl acetate with water using Ostwald's viscometer	**15**	**4**
2. To determine the Critical Micellar Concentration (CMC) of a given surfactant Sodium Dodecyl Sulphate (SDS) using conductivity method	**15**	**4**
3. To study the effect of temperature on rate of reaction between hypo solution and HCl	**15**	**4**
4. To prepare sodium tris-oxalato ferrate (III)	**15**	**4**
5. Preparation of ammonium nickel (II) sulfate hexahydrate, $(NH_4)_2Ni(SO_4)_2.6H_2O$	**15**	**4**
6. To prepare hexakis thiourea plumbus (II) nitrate hexahydate	**15**	**4**
7. To prepare tetraamine copper sulphate	**10**	**4**

Instructional Methodand Pedagogy:

Classroom lecture, discussion, question and answer method, Case studies, quizes, presentations, role play, expert lecture(Consultant)

Course outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1: Understand the laws governing the solution state and apply the same for practical utility	Understand and apply	
CO2: Understand phase rule, phase equilibria, phase diagrams and their industrial utility	Understand and apply	
CO3: Understand and apply the concepts of electrochemistry	Understand and apply	
CO4: Synthesize and convert amino acids, diazonium sales and carboxylic acids	Create	
CO5: Synthesize amino acids, peptides and proteins and study their properties and conversions thereof.	Create

COURSE CODE BSMA415	COURSE NAME BIOSTATISTICS	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
30	0	15	45	2	0	1	3

Course Pre-requisites	Students should have basic knowledge of Calculus & Algebra.
Course Category	Core course
Course focus	Skill development
Rationale	Biostatistics is the application of statistical methods to biological, health, and medical data. It involves collecting, analysing, and interpreting data to draw meaningful conclusions in fields like epidemiology, genetics, and public health. Biostatisticians design experiments, develop models, and utilize advanced statistical techniques to uncover patterns, trends, and relationships within biological systems. They play a crucial role in medical research, clinical trials, and public health interventions by providing insights into disease prevention, treatment effectiveness, and healthcare policies.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1 **Remember:** Use discrete and continuous probability distributions, including requirements, mean and variance, and making decisions. 2 **Apply:** Use Poisson, exponential distributions to solve statistical problems. 3 **Understand, Apply:** Identify the type of statistical situation to which different distributions can be applied. 4 **Understand:** Define and distinguish between population parameters and sample statistics. 5 **Understand, Apply:** Explain what is meant by statistical inference..

Course Content (Theory)	**Weightage**	**Contact hours**
Unit 1: Concept of sampling, Introduction to Probability, basic results and theorems of Probability.	**20%**	**6**
Unit 2: Concept of random variable, Probability distribution of random variable, Expectation and variance.	**20%**	**6**
Unit 3: Study of Binomial, Poisson and Normal Distribution, Application of this distribution in Bio –Sciences.	**20%**	**6**
Unit 4: Basic principles of statistical inference, Point estimation, Internal estimation, Statistical Hypothesis framing.	**20%**	**6**
Unit 5: Test of Significance, p- value, t – test, F – test, chi – square test, ANOVA etc.	**20%**	**6**

List Of Practical	**Weightage**	**Contact hours**
1: Tutorials Based on Basic Probability.	**20%**	**3**

2: Tutorials Based on Probability distribution and random variables.	**20%**	**3**
3: Tutorials based on Binomial, Poisson and Normal Distribution.	**20%**	**3**
4: Tutorials based on Hypothesis testing.	**20%**	**3**
5: Tutorials based on Tests of Significance	**20%**	**3**

Instructional Method and Pedagogy: (Max. 100 words) Chalk-board, PPT, Computer Based learning, Use of M.S. Excel and Geogebra Toolbox.

Course outcome:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to: CO1: **Understand :** Define and distinguish between populations and samples CO2: **Apply:** Compute a sample and polulation mean, sample variance, and sample standard deviation CO3: **Remember, Understand:** Know the practical issues arising in sampling studies. CO4: **Apply, Analyse:** Appropriately interpret results of analysis of variance tests. CO5: **Analyse:** Analyse statistical data using MS-Excel.

COURSE CODE	COURSE NAME	SEMESTER
BSBO305	Biophysics	III

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	Understanding of basic sciences up to school level (10+2 level).
Course Category	Mandatory courses
Course focus	Employability
Rationale	It equips biotechnologists with a strong foundation in the physical principles underlying biological systems, enabling them to contribute to research, innovation, and technological advancements in biotechnology both at the national and international levels. It is important in understanding biological processes, molecular modeling, biophysical techniques, biomolecular engineering, instrumentation, international collaboration, and emerging technologies.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	Course Objectives: Students will be able to: 1: To provide introductory knowledge of Biophysics to the students 2: To familiarize students with relevant applications required for study of biological systems 3: To enable the students to address any elementary thermodynamic problems in biological systems 4: To familiarize the student with chemical thermodynamics of biological systems 5: To familiarize students with modern developments in the area of biomaterials

Course Content (Theory)	Weightage	Contact hours
Unit 1: Building Blocks & Structure of Living State: Atoms and ions, molecules essential for life, what is life. Living state interactions: Forces and molecular bonds, electric & thermal interactions, electric dipoles, casimir interactions, domains of physics in biology.	**20%**	**6**
Unit 2: Heat Transfer in biomaterials: Heat TransferMechanism, The Heat equation, Joule heating of tissue. Living State Thermodynamics: Thermodynamic equilibrium.	**20%**	**6**
Unit 3: Thermodynamics: First law of thermodynamics and conservation of energy. Entropy and the second law of thermodynamics, Physics of many particle systems, two state systems, continuous energy distribution, Composite systems, Casimir contribution of free energy, Protein folding and unfolding.	**20%**	**6**

Unit 4: Thermodynamics: Open systems and chemical thermodynamics: Enthalpy, Helmholtz Free energy, Gibbs Free Energy and chemical potential.	**20%**	**6**
Unit 5: Thermodynamics: Activation energy and rate constants, enzymatic reactions, ATP hydrolysis & synthesis, Entropy of mixing, The grand canonical ensemble, Haemoglobin.s	**20%**	**6**

List Of Practical	Weightage	Contact hours
Based on theory		

Instructional Method and Pedagogy: (Max. 100 words)
Audiovisuals, Seminars, Quiz, PPT, Demonstration, Case studies

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: CO1:Students will have sufficient knowledge of Biophysics for undergraduate studies	Understand	Describe
CO2: Students will be familiar with concepts that help them prepare for modern courses like Bioinstrumentation.	Understand and Create	Describe
CO3: Students will be able to understand and appreciate the interdisciplinary nature of the modern researches	Evaluate and Analyse	Describe and Explain
CO4: Students will be able to prepare working models on Biophysical systems	Remember, Apply and Create	Describeand classify
CO5: Students will be able to continue learning through various e-resources	Understand and apply	Classify and Explain

COURSE CODE AECC401	COURSE NAME ENVIRONMENTAL SCIENCE	SEMESTER IV

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	10 +2 (With Arts/Science/Commerce)
Course Category	Ability Enhancement Compulsory Course.
Course focus	Employability
Rationale	The fundamental concepts of environmental studies help in understanding the ecosystem and biogeochemical cycle that connects humans with their biosphere. Moreover, understanding pollution & treatment to treat a variety of pollution will enhance problem-solving skills of the students.
Course Revision/ Approval Date:	07/03/2024
Course Objectives (As per Blooms' Taxonomy)	To enable the student to: 1. **Remember:** To acquire an awareness of and sensitivity to the total environment and its allied problems. 2. **Understand:** To make educated judgments about environmental issues. 3. **Apply:** Develop skills and a commitment to act independently and collectively to environmental sustainability 4. **Analyse:** Students can able to debate environmental science with use of appropriate scientific information 5. **Create:** Engaging with students of all disciplines to think critically, ethically, and creatively when evaluating environmental issues.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction of Ecology Ecology-Objectives and Classification Concepts of an ecosystem-structure & function of ecosystem components of ecosystem, Hydrological cycle, carbon cycle, oxygen cycle, Nitrogen cycle, Sulphur cycle	20%	6
Unit 2: Unit 2: Ecological pyramids of various ecosystems Forest Ecosystem, Grassland Ecosystem, Desert Ecosystem, Aquatic ecosystem, Estuarine Ecosystem.	20%	6
Unit 3: Air pollution and its control Introduction, Classification of air pollutants, air pollutants and their effects, acid rain, photochemical smog, particulates. Characteristics and biochemical effects of some important air pollutants, Effect of air pollutants on man and environment, Air quality standard, air monitoring and control of air pollution	20%	6

Unit 4: Water pollution and its control Introduction, Classification of water pollutants, physical, chemical and biological characteristics of waste water, waste water treatment: Primary treatment- Sedimentation, coagulation, equalization, neutralization, secondary treatment-aerobic treatment-aerated lagoons, trickling filter, activated sludge process, oxidation ditch process, oxidation pond, anaerobic treatment-anaerobic sludge digestion, sludge treatment and disposal and tertiary treatment-evaporation, ion exchange, adsorption, chemical precipitation, Electrodialysis, reverse osmosis.	20%	6
Unit 5: Solid and hazardous waste: pollution, treatment and disposal Introduction, Classification and origin, characteristics of solid wastes, objectives and considerations in solid waste management, methods of solid waste treatment and disposal - composting, land filling, thermal processes- incineration, pyrolysis, recycling and reuse of solid waste-co-disposal, bioconversion.	20%	6

Instructional Methodand Pedagogy:

Utilizing models, PowerPoint Presentations, group discussions, and seminars are some of the methods adopted to improve the student's ability to grasp the principles of environmental studies.

Course Outcome:	Blooms' Taxonomy Domain	Blooms' Taxonomy Subdomain
After successful completion of the above course, students will be able to:		
CO1: Skills for identifying environmental problems: Evaluate information from popular electronic and print media	Understand & remember	Define, Classify & Describe
CO2: Interdisciplinary - When encountering environmental problems students will assess necessary scientific concepts and data, consider likely social dynamics, and establish integral cultural contexts	Understand, Remember & Analyse	Define, Classify, Describe, Demonstrate & & Examine
CO3: Communication - Students will communicate with precision, effective art, and sound rhetoric in writing, in speech, and in digital media	Understand, Remember & Apply	Define, Classify, Describe & Demonstrate
CO4: Research - When faced with questions that lie	Understand,	Define, Classify,

beyond their current knowledge base, students will actively research data, concepts, histories, and narratives necessary for adequate consideration of the issue.	Remember, Apply & Analyse	Describe, Demonstrate & Examine
CO5: Intellectual Flexibility - Students will possess the intellectual flexibility necessary to view environmental questions from multiple perspectives, prepared to alter their understanding as they learn new ways of understanding.	Understand, Remember, Analyse & Apply	Define, Describe & Demonstrate

Learning Resources	
1.	Reference/Text Books: 1. Fundamentals of Ecology by EP Odum Cengage 2. Big Questions in Ecology & Evolution by TN Sherratt & DM Wilkinson, Oxford. 3. Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
30	0	0	30	2	0	0	2

Course Pre-requisites	Students should have basic knowledge about Immunity.
Course Category	Ability Enhancement Compulsory Course
Course focus	Employability
Rationale	To have an overview of inter-relationship between disaster and development and various disaster management frameworks and strategies.
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	**1. Remember** To introduce inter-relationship between disaster and development. **2. Apply** To introduce types of disasters with case studies and create awareness. **3. Analyses** To study the effective use of science for mitigating disasters **4. Create** To study case study of various famous disasters. **5. Understand** To introduce various disaster management frameworks and strategies adopted at national and international levels.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Understanding the Concepts and Definitions of Disaster, Hazard, Vulnerability Risk, Capacity Disaster and Development, and Disaster Management Fundamental of Disasters-Types, Trends, Causes, Consequences and Control: Geological Disasters, Hydro-Meteorological Disasters, Biological Disasters, Technological Disasters, and Man-made Disasters. Global Disaster Trends – Emerging Risks of Disasters – Climate Change and Urban Disasters.	**20%**	**6**

Unit 2: Disaster Management Cycle and Framework-Disaster Management Cycle – Paradigm Shift in Disaster Management, Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, Zonation, Micro zonation, Prevention and Mitigation of Disasters, Early Warning System, Preparedness, Capacity Development; Awareness, During Disaster – Evacuation – Disaster Communication – Search and Rescue, Emergency Operation Centre– Incident Command System – Relief And Rehabilitation. Post -disaster Damage and Needs Assessment, Restoration of Critical Infrastructure – Early Recovery – Reconstruction and Redevelopment; IDNDR, Yokohama Strategy, Hyogo Framework of Action, Sendai framework.	**20%**	**6**
Unit 3: Disaster Management in India Disaster Profile of India – Mega Disasters of India and Lessons Learnt, Disaster, Management Act 2005 – Institutional and Financial Mechanism, National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter Governmental Agencies. Disaster Management Act in relation to COVID 19 Pandemic.	**20%**	**6**
Unit 4: Role of Science and Technology in Disaster Management Geo-informatics in Disaster Management (RS, GIS, GPS and RS), Disaster Communication System (Early Warning and Its Dissemination), Land, Planning and Development Regulations, Disaster Safe Designs and Constructions, Structural and Non-Structural Mitigation of Disasters, S&T Institutions for Disaster Management in India.	**20%**	**6**
Unit 5: Disaster Case Studies Various Case Studies on Disaster and Development, Disaster Prevention and Control, Risk Analysis and Management. Case study relating to COVID -19 to be explored.	**20%**	**6**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: **CO1** Possess awareness to mitigate the effects of disaster.	Remember	Explain, Describe, Discuss, Recall, Locate

CO2 Know local disaster management policies, regulations and authorities.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Contribute in capacity building measures to mitigate disasters.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Understanding role of science in mitigating disasters.	Create	Construct, Develop, Produce
CO5 Contribute to safe society by the study of various disasters.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE	COURSE NAME	SEMESTER
BSMB501	VIROLOGY	V

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	-	120	4	0	2	6

Course Pre-requisites	Basic knowledge of microbial world and viruses.
Course Category	Core Professional
Course focus	Employability
Rationale	Students will get an overview of types of viruses, their replication strategies and mechanisms for development of viral infectious diseases.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	1. **Remember** The course will give an overview of types of viruses, their replication strategies and mechanisms for development of viral infectious diseases. 2. **Apply** The distinctive characteristics between prokaryotes, eukaryotes and viruses. The biological, chemical and physical properties of viruses. The principles of viral taxonomy 3. **Analyses** The structure of viruses and their replicative cycle 4. **Create** The bases of viral genetic variability and the principles of viral evolution. 5. **Understand** The interaction virus-host and mechanisms of disease.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Nature and Properties of Viruses Introduction: Discovery of viruses, nature and definition of viruses, general properties, concept of viroids, virusoids, satellite viruses and Prions. Theories of viral origin Structure of Viruses: Capsid symmetry, enveloped and non-enveloped viruses Isolation, purification and cultivation of viruses' Viral taxonomy: Classification and nomenclature of different groups of viruses	**25%**	**15**
Unit 2:Bacteriophages Diversity, classification, one step multiplication curve, lytic and lysogenic phages (lambda phage) concept of early and late proteins, regulation of transcription in lambda phage.	**25%**	**15**

Unit 3:Viral Transmission, Salient features of viral nucleic acids and Replication Modes of viral transmission: Persistent, non-persistent, vertical and horizontal Salient features of viral Nucleic acid : Unusual bases (TMV,T4 phage), overlapping genes (ϕX174, Hepatitis B virus), alternate splicing (HIV), terminal redundancy (T4 phage), terminal cohesive ends (lambda phage), partial double stranded genomes (Hepatitis B), long terminal repeats (retrovirus), segmented (Influenza virus), and non-segmented genomes (picornavirus), capping and tailing (TMV) Viral multiplication and replication strategies: Interaction of viruses with cellular receptors and entry of viruses. Replication strategies of viruses as per Baltimore classification (phi X 174, Retroviridae, Vaccinia, Picorna). Assembly, maturation and release of virions.	**20%**	**12**
Unit 4: Viruses and Cancer Introduction to oncogenic viruses Types of oncogenic DNA and RNA viruses: Concepts of oncogenes and proto- oncogenes.	**20%**	**12**
Unit 5: Prevention & control of viral diseases Antiviral compounds and their mode of action Interferon and their mode of action General principles of viral vaccination **Applications of Virology** Use of viral vectors in cloning and expression, Gene therapy and Phage display.	**10%**	**06**

List Of Practical	Weightage	Contact hours
1:Isolation and enumeration of bacteriophages (PFU) from water/sewage sample using double agar layer technique.	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: **CO1** Understand the structure and life cycle of viruses as well as viral evolution.	Remember	Explain, Describe, Discuss, Recall, Locate

CO2 Know the mechanisms of host immune responses to viral infections.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Understand the pathogenesis of viral infections.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Understand the methodological approaches in diagnostic investigation of infectious diseases.	Create	Construct, Develop, Produce
CO5 Understand the epidemiology of infections.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB502	COURSE NAME MEDICAL MICROBIOLOGY	SEMESTER V

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about medical microbiology.
Course Category	Core Professional
Course focus	Employability
Rationale	To have an overview of medical microbiology
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** To study normal microflora of human body **Apply** To study host pathogen interactions. **Analyses**To study bacterial, viral, fungal, protozoan diseases. **Create** To study about anti-microbial agents/drugs. **Understand** To study about the mode of action of drugs.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Normal microflora of the human body and host pathogen interaction Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract Host pathogen interaction: Definitions - Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS. Sample collection, transport and diagnosis Collection, transport and culturing of clinical samples, principles of different diagnostic tests (ELISA, Immunofluorescence, Agglutination based tests, Complement fixation, PCR, DNA probes).	**20%**	**6**
Unit 2: Bacterial diseases List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control respiratory diseases: *Streptococcus pyogenes, Haemophilus influenzae, Mycobacterium tuberculosis Gastrointestinal Diseases: Escherichia coli, Salmonella typhi, Vibrio cholerae, Helicobacter pylori Others: Staphylococcus aureus, Bacillus anthracis, Clostridium tetani, Treponema pallidum, Clostridium* deficient.	**20%**	**6**

Unit 3:Viral diseases List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis Protozoan Diseases List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control Malaria, Kala-azar.	**20%**	**6**
Unit 4:Fungal diseases Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention Cutaneous mycoses: Tinea pedis (Athlete's foot) Systemic mycoses: Histoplasmosis Opportunistic mycoses: Candidiasis parameters -pH, temperature, dissolved oxygen, foaming and aeration	**20%**	**6**
Unit 5: Antimicrobial agents: General characteristics and mode of action. Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Inhibitor of metabolism Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine Antibiotic resistance, MDR, XDR, MRSA,NDM-1.	**20%**	**6**

List Of Practical	**Weightage**	**Contact hours**
1. Identify bacteria (any three of E. coli, Salmonella, Pseudomonas, Staphylococcus, Bacillus) using laboratory strains	**20%**	**12**
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS.	**20%**	**12**
3. Study of bacterial flora of skin by swab method, Perform antibacterial sensitivity by Kirby-Bauer method,Determination of minimal inhibitory concentration (MIC) of an antibiotic.	**20%**	**12**
4. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).	**20%**	**12**
5. Study of various stages of malarial parasite in RBCs using permanent mounts.	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	To study normal microflora of human body.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	To study host pathogen interactions.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	To study bacterial, viral, fungal, protozoan diseases.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4	To study about anti-microbial agents/drugs.	Create	Construct, Develop, Produce
CO5	To study about the mode of action of drugs	Understand	Explain, Describe, outline, Predict, Summarize

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of microbial biotechnology.
Course Category	Core Professional
Course focus	Employability
Rationale	To have an overview of microbial biotechnology.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** To introduce students to the developments/advances made in the field of microbial biotechnology. **Apply** To know the usage of microbes and their products in therapeutics. **Analyses** To understand the applications of microbes in Biotransformation. **Create**To demonstrate the recovery of microbial products and an overview of Intellectual Property Rights. **Understand** To get insights in using microbes for Bioenergy and bioremediations.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology Use of prokaryotic and eukaryotic microorganisms in biotechnological applications Genetically engineered microbes for industrial application: Bacteria and yeast	**20%**	**6**
Unit 2: Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine) Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics Microbial biosensors. Therapeutics and Host pathogen interactions	**20%**	**6**

Unit 3: RNAi & Applications of Microbes in Biotransformation RNAi and its applications in silencing genes, drug resistance; Microbial based transformation of steroids and sterols Bio- catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute.	**20%**	**6**
Unit 4: Microbial Products, their Recovery & Intellectual Property Rights. Microbial product purification: filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization; Patents, Copyrights, Trademarks.	**20%**	**6**
Unit 5: Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents	**20%**	**6**

List Of Practical	Weightage	Contact hours
1. Study yeast cell immobilization in calcium alginate gels	**20%**	**12**
2. Study enzyme immobilization by sodium alginate method	**20%**	**12**
3. Isolation of xylanase or lipase producing bacteria	**20%**	**12**
4. Pigment production from fungi or bacteria.	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

COURSE CODE BSMB504	COURSE NAME RESEARCH METHODOLOGY	SEMESTER V

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
60	60	-	120	4	0	2	6

Course Pre-requisites	Basic knowledge of Research Methodology.
Course Category	Core Professional
Course focus	Employability
Rationale	Students will get an overview of Methodology of research and handling processes
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	**1. Remember** The objective of this course is to familiarize students with the research methodology and importance of project writing. **2. Apply** understand some basic concepts of research and its methodologies. **3. Analyses** Students should understand a general definition of research design **4. Create** Students should know why educational research is undertaken, and the audiences that profit from research studies. **5. Understand** Students should be able to identify the overall process of designing a research study from its inception to its report.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Theory: Basic concepts of Research: definition and types of research (Descriptive vs analytical; applied vs fundamental; quantitative vs qualitative; conceptual vs emperical). Research methods vs methodology. Literature-review and its consolidation; Library research; field research; laboratory research. Defining the Research Problem: Selecting and defining a research problem, Reviewing and conducting literature search, Developing a research plan.	**20%**	**12**
Unit 2: Theory: Data collection and documentation of observations: Methods of data collection, Maintaining a laboratory record; Tabulation and generation of graphs. Imaging of tissues specimens and application of scale bars.	**20%**	**12**
Unit 3: Theory: Model organisms in biology (A Brief overview): Genetics, Physiology, Biochemistry, Molecular Biology, Cell Biology, Genomics, Proteomics-Transcriptional regulatory network. Designing of Experiment: Different experimental designs – single and multifactorial design, Making measurements and sources of error in measurements	**20%**	**12**
Unit 4: Theory: General laboratory practices: Common calculations in laboratories. Understanding the details on the label of reagent bottles. Molarity and normality of common acids and bases. Preparation of solutions. Dilutions. Percentage solutions. Molar, molal and normal solutions. Technique of handling micropipettes; Knowledge about common toxic chemicals and safety measures in their handling.	**20%**	**12**
Unit 5: Theory: The art of scientific writing and its presentation**:** Numbers, units, abbreviations and nomenclature used in scientific writing. Writing references. Powerpoint presentation. Poster presentation. Scientific writing and ethics, Introduction to copyright-academic misconduct/plagiarism	**20%**	**12**

List Of Practical	Weightage	Contact hours
1.Each student will be asked to make presentation about the project including literature available, objective sought and work plan including methodologies as described above.	**20%**	**12**
2.The student will write standard operating protocols (SOPs) and identify requirement for equipment and reagents.	**20%**	**12**
3. Experiments based on chemical calculations	**20%**	**12**
4.Poster presentation on defined topics.	**20%**	**12**

5.Technical writing on topics assigned.	**20%**	**12**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Sub Domain**
After successful completion of the above course, students will be able to:		
CO1 Understand some basic concepts of research and its methodologies.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2 Identify appropriate researchtopics.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Select and define appropriate research problem and parameters .	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Prepare a project proposal(to undertake a project).	Create	Construct, Develop, Produce
CO5 Organize and conduct research (advanced project) in a more appropriate manner .	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB505	COURSE NAME BIOANALYTICAL TOOLS	SEMESTER V

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	-	120	4	0	2	6

Course Pre-requisites	Students should possess basic knowledge about biological analytical tools for deep understanding of theory and practical.
Course Category	Core Professional
Course focus	Employability
Rationale	To understand the principle of various biophysical techniques.
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	1. **Remember** To gain knowledge on the various techniques for bimolecular separation and purification. 2. **Apply** To understand the principle of various biophysical techniques. 3. **Analyses** To understand the instrumentation and application of various techniques. 4. **Create** To learn various biophysical techniques for characterization of the biomolecules. 5. **Understand** To solve diverse analytical problems and develop an analytical mindset.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Simple microscopy, phase contrast microscopy, fluorescence and electron microscopy (TEM and SEM)	**20%**	**12**
Unit 2:pH meter, absorption and emission spectroscopy, Principle and law of absorption fluorimetry, colorimetry, spectrophotometry (visible, UV, infra-red).	**20%**	**12**
Unit 3: Centrifugation, cell fractionation techniques, isolation of sub- cellular organelles and particles.	**10%**	**6**
Unit 4: Introduction to the principle of chromatography. Paper chromatography, thin layer chromatography, column chromatography: silica and gel filtration, affinity and ion exchange chromatography, gas chromatography, HPLC.	**25%**	**15**

Unit 5: Introduction to electrophoresis. Starch-gel, polyacrylamide gel (native and SDS-PAGE). Introduction to agarose-gel electrophoresis, pulse field gel electrophoresis, immuno- electrophoresis, isoelectric focusing, Western blotting. Introduction to Biosensors and Nanotechnology and their applications.	**25%**	**15**

List Of Practical	Weightage	Contact hours
1: Demonstration of Fluorescence microscope	**10%**	**4**
2: Preparation of protoplasts/spheroplast from leaves/ Bacteria	**10%**	**4**
3: Verify Beer's and Lambert's law using KMnO4	**10%**	**4**
4: Separation of cellular components using sucrose gradient	**10%**	**4**
5: Separation of Serum and blood cells	**10%**	**4**
6: Paper, TLC and column chromatography of amino acids, lipids and plant pigments	**20%**	**8**
7: Working of HPLC, GC (Demo)	**20%**	**8**
8: SDS PAGE of Protein	**10%**	**4**
9: Native Gel electrophoresis of Protein	**10%**	**4**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: **CO1** Assimilate the principles and applications of centrifuge, electrophoresis.	Remember	Explain, Describe, Discuss, Recall, Locate

CO2 Employ the knowledge for the separation of proteins/peptides by selecting appropriate separation techniques.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Characterize certain functionalities of biomolecules by using spectroscopic techniques.	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Assimilate the principles and applications of chromatography in research and related experiments.	Create	Construct, Develop, Produce
CO5 Plan experiments for separations and purifications of biomolecules.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB506	COURSE NAME Microbes in sustainable agriculture and development	SEMESTER V

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about microbes in sustainable agriculture and development.
Course Category	Core Professional
Course focus	Employability
Rationale	To have an overview of microbes in sustainable agriculture and development
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** To learn balancing of our economic, environmental and social needs. **pply** To study role of microbes in sustainable agriculture. **Analyses** To study the biology and evolution of microorganisms and their interactions with the environment. **Create** To ensure healthy lives and promote well-being for all at all ages. **derstand** To explore about good practices in agriculture establishment using microbes.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Soil Microbiology - Soil as Microbial Habitat, Soil profileand properties, Soil formation, Diversity and distribution of microorganisms in soil	20%	12
Unit 2: Mineralization of Organic & Inorganic Matter in Soil. Mineralization of cellulose, hemicelluloses, lignocelluloses, lignin and humus, phosphate, nitrate, silica, potassium.		
Unit 3: Microbial Activity in Soil and Green House Gases. Carbon dioxide, methane, nitrous oxide, nitric oxide – production and control	20%	12

Unit 4: Microbial Control of Soil Borne Plant Pathogens Biocontrol mechanisms and ways, Microorganisms used as biocontrol agents against Microbial plant pathogens, Insects, Weeds Biofertilization, Phyto stimulation, Bioinsecticides. Plant growth promoting bacteria, biofertilizers – symbiotic (Brady rhizobium, Rhizobium, Frankia), Non-Symbiotic (Az spirillum, Azotobacter, Mycorrhizae, MHBs, Phosphate solubilizers, algae), Novel combination of microbes as biofertilizers, PGPRs.	20%	12
Unit 5: Secondary Agriculture Biotechnology Biotech feed, Silage, Bio manure, biogas, biofuels – advantages and processing parameters. GM crops - Advantages, social and environmental aspects, Bt crops, golden rice, transgenic animals.	20%	12

List Of Practical	Weightage	Contact hours
1. Study soil profile.	**20%**	**12**
2. Study microflora of different types of soils.	**20%**	**12**
3. Rhizobium as soil inoculants characteristics and field application.	**20%**	**12**
4. Azotobacter as soil inoculants characteristics and field application.	**20%**	**12**
5. Design and functioning of a biogas plant. Isolation of cellulose degrading organisms.	**20%**	**12**

Instructional Method and Pedagogy:

COURSE CODE AECC601	COURSE NAME INDIAN CONSTITUTION	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
30	0	0	30	2	0	0	2

Course Pre-requisites	10 +2 (With Arts/Science/Commerce)
Course Category	Ability Enhancement Compulsory Course.
Course focus	Skill development
Rationale	The fundamental concepts of Indian Constitution help in understanding the role of government and framework of Indian Constitution. This subject also enables the students to understand the administrative organizational structure of India.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	To enable the student: **1.** To understand Indian Constitution. **2.** To know the framework of Indian Constitution. **3.** To aware role of government of the union. **4.** To aware role of the state government. **5.** To understand administration organization.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Constitution – Strategies and Principles 1. Meaning and important of constitution 2. Making of Indian constitution – sources 3. Salient Features of Indian constitution.	**20%**	**6**
Unit 2: Fundamental Rights and Directive Principles 1. Fundamental Rights 2. Fundamental Duties 3. Directive Principles	**20%**	**6**

Unit 3: Government of the Union 1. President of India – Election and powers 2. Prime Minister and council of ministers 3. Lok Sabha – composition and Powers	**20%**	**6**
4. Rajya Sabha – Composition and Powers.		
Unit 4: Government of the States & The Judiciary 1. Governor – Powers 2. Chief Minister and Council of ministers 3. Legislative Assembly – Composition and Powers 4. Legislative Council – Composition and Powers 5. Features of judiciary system in India 6. Supreme Court – Structure and Jurisdiction.	**20%**	**6**
Unit 5: Administrative Organization and Constitution 1. Federalism in India – features 2. Local Government – Panchyats and Powers andfunctions 73rd and 74th Amendments 3. Election Commission – Organization and functions 4. Citizen Oriented Measure – RTI and PIL – Provisions and Significance.	**20%**	**6**

Instructional Methodand Pedagogy:

Utilizing models, PowerPoint Presentations, group discussions, and seminars are some of the methods adopted to improve the student's ability to grasp the principles of environmental studies.

Course Outcome:	**Blooms' Taxonomy Domain**	**Blooms' Taxonomy Subdomain**
After successfulcompletion of the above course, students will be able to:		
CO1: Analyse importance of Indian constitution	Understand	Define, Classify & Describe
CO2: Analyse importance of Indian constitution	Apply	Define, Classify, Describe, Demonstrate & Examine
CO3: Know powers of state and union government.	Analyses and Evaluation	Define, Classify, Describe & Demonstrate

CO4: Understand administration of Indian Constitution	Apply & analyse	Define, Classify, Describe, Demonstrate & Examine
CO5: Understand administration of Indian Constitution.	Remember & apply	Define, Describe & Demonstrate

COURSE CODE BSMB601	COURSE NAME IMMUNOLOGY	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
6	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about Immunity.
Course Category	Core Professional.
Course focus	Employability
Rationale	To have an overview of Immune response and it's components. The subject also explains the regulation of immunoglobulin gene, major histocompatibility complexes, vaccines and vaccine development and immunodiagnostics.
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	1. **Remember** Outline, compare and contrast the key mechanisms and cellular players of innate and adaptive immunity. 2. **Apply** Elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses. 3. **Analyses** Outline key events and cellular players in antigen presentation, and how the nature of the antigen will shape resulting effectors responses. 4. **Create** Understand and explain the basis of allergic diseases and immunodeficiencies related diseases. 5. **Understand** The principles governing vaccination and the mechanisms of protection against disease.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Immune Response Theory: An overview, components of mammalian immune system, molecular structure of Immunoglobulins or Antibodies. Humoral & Cellular immune responses, T- lymphocytes & immune response (cytotoxic T-cell, helper T-cell, suppressor T-cells), Tcell receptors, genome rearrangements during Blymphocyte differentiation, Antibody affinity maturation class switching, assembly of T-cell receptor genes by somatic recombination.	**20%**	**12**

Unit 2: Regulation of immunoglobulin gene expression Theory: Clonal selection theory, allotypes & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line & somatic mutation), antibody diversity.	**20%**	**12**
Unit 3: Regulation of immunoglobulin gene expression Theory: Clonal selection theory, allotypes & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line & somatic mutation), antibody diversity.	**20%**	**12**
Unit 4: Vaccines & Vaccination Theory: Adjuvants, cytokines, DNA vaccines, recombinant vaccines, bacterial vaccines, viral vaccines, vaccines to other infectious agents, passive & active immunization.	**20%**	**12**
Unit 5: Immunodiagnostics Theory: Introduction to immunodiagnostics – RIA, ELISA. etc	**20%**	**12**

List Of Practical	Weightage	Contact hours
1: Differential leucocytes count	**10%**	**4**
2: Total leucocytes count	**10%**	**4**
3: Total RBC count	**10%**	**4**
4: Separation of serum from blood	**10%**	**4**
5: Hemagglutination assay	**10%**	**4**
6: Hemagglutination inhibition assay	**10%**	**4**
7: Latex Agglutination Assay	**10%**	**4**
8: Single radial ImmunoAssay	**10%**	**4**
9: Double immunodiffusion test using specific antibody and antigen.	**10%**	**4**
10: Dot ELISA	**10%**	**4**
11: Sandwich ELISA	**10%**	**4**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to: **CO1** Outline, compare and contrast the key mechanisms and cellular players of innate and adaptive immunity.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2 Elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3 Outline key events and cellular players in antigen presentation, and how the nature of the antigen will shape resulting effector responses	Analyses and Evaluation	Compare, Classify, Select, Investigate
CO4 Understand and explain the basis of allergic diseases and immunodeficiencies related diseases.	Create	Construct, Develop, Produce
CO5 Understand the principles governing vaccination and the mechanisms of protection against disease.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB602	COURSE NAME BIOINFORMATICS AND INTRODUCTION TO DRUG DISCOVERY, DESIGN AND DEVELOPMENT	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about fundamental theories and practices of bioinformatics and it will also provide an overview of the drug development process, focusing on drug development science, regulation.
Course Category	Core Professional.
Course focus	Employability
Rationale	To have an overview of the fundamental theories and practices of bioinformatics and an overview of the drug development process, focusing on drug development science, regulation.
Course Revision/ Approval Date:	14/03/2020
Course Objectives **(As per Blooms' Taxonomy)**	1. **Remember** provide an overview of the drug development process, focusing on drug development science, regulation. 2. **Apply** to introduce the fundamental theories and practices of bioinformatics, which is an interdisciplinary thrust area merging Biology and Information Technology. 3. **Analyses** Safety evaluation, bioavailability, clinical trials, and the essentials of patent law. 4. **Create** drug development as a process involving target selection, lead discovery using computer-based methods and combinatorial chemistry/high-throughput screening. 5. **Understand** Understand biological databases, analysis of macromolecular Sequences and phylogenetic analysis.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Basic Computer- MS-WORD, EXCEL, Microsoft PowerPoint, Adobe Photoshop Introduction to Bioinformatics: Introduction to Bioinformatics**,** Introduction to biological macromolecules, History of Bioinformatics, Scope of Bioinformatics Introduction to Biological databases, Nucleic acid databases**:** Introduction to biological databases in general, Classification- Primary, Secondary, Composite databases, Flat files in databases, various file formats, FASTA, GENBANK, Nucleic acid sequence databases- GENBANK, EMBL, DDBJ etc.	**20%**	**12**
Unit 2: Protein databases and specialized databases: Protein sequence and structure databases – UNIPROT, PIR, SWISS-PROT, PDB etc., Other databases of patterns/ motifs/ metabolic pathways/ Immunology/genetic disorders etc, Composite databases like NCBI, Data base searching, Bibliographic databases like PUBMED	**20%**	**12**
Unit 3: Genome databases and search protocol: Genome databases at NCBI, SANGER, TIGR etc.Secondary database search protocol, Use of Boolean operators	**20%**	**12**
Unit 4: Sequence alignment**:** Pairwise alignment techniques Global alignment, Local alignment**,** pairwise alignment techniques- continued, Significance of alignment- Z-score, P-score, E-value**,** Multiple sequence alignment-Dynamic programing Sequence alignment, BLAST analysis**:** Multiple sequence alignment techniques- continued- profile, Hidden Markov Model, BLAST analysis, E-value, Different types of BLAST, PSI-BLAST, PHI-BLAST.	**20%**	**12**
Unit 5: Introduction to Drug Discovery, Design and Development: Introduction to Drug Design and Development, Drug targets, Lead Identification and Modification, Computer-Aided Drug Design, Drug Delivery, Pre-clinical and Clinical Testing Overview and career opportunities	**20%**	**12**

List Of Practical	Weightage	Contact hours
1: Use of various tools in NCBI and Familiarizing with various databases like PROSITE, PUBMED, OMIM, KEGG etc.	**20%**	**12**
2: Retrieval of nucleotide and protein sequences from databases like GENBANK, UNIPROT etc and Homology modeling using SWISS-PROT	**20%**	**12**
3: Familiarizing with genome specific databases like TAIR, GENE db. Etc.	**20%**	**12**
4: Sequence alignment- Pairwise and Multiple Sequence alignment and Phylogeny analysis BLAST analysis and Variations in BLAST analysis.	**20%**	**12**

5: Use of visualizing software like PYMOL, CHIMERA and Using various web-based software for primer designing, sequence and structure analysis like PROTPARAM, PROCHECK etc.	**20%**	**12**

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Outcomes:	Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
After successful completion of the above course, students will be able to:		
CO1 Basic Computer skills.	Apply	Explain, Describe, Discuss, Recall, Locate
CO2 Acquire knowledge about various biological databases and how to retrieve and use data from these databases.	Understand	Apply, Practice, Interpret, Select, Correlate
CO3 Understand the concepts involved in sequence alignment and phylogeny Analysis.	Remember	Compare, Classify, Select, Investigate
CO4 Be able to describe the process of drug discovery and development .	Create	Construct, Develop, Produce
CO5 Be able to discuss the challenges faced in each step of the drug discovery process.	Analyses and Evaluation	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB603	COURSE NAME FOOD AND DAIRY MICROBIOLOGY	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of food and dairy microbiology.
Course Category	Core Professional.
Course focus	Employability
Rationale	To have an overview of the basic food and dairy microbiology.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** Developed a clear understanding of the multifarious roles of microorganisms in soil, in association with plants and thus in the field of agriculture. **Apply** Are able to describe the role of microorganisms in the production of food, its spoilage, including their role in homemade fermented foods. **Analyses** Are able to identify the role of microorganisms in the causation of the diseases and how to protect against food- borne pathogens. **eate** Developed experimental skills for testing the milk and different foods for the presence of microorganisms. **derstand** To develop Understanding in dairy sciences.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Foods as a substrate for microorganisms. Intrinsic and extrinsic factors that affect growth and survival of microbes in foods, natural flora and source of contamination of foods in general. **Microbial spoilage of various foods.** Principles, Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods.	20%	12
Unit 2: Principles, physical methods of food preservation: temperature (low, high, canning, drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging, chemical methods of food preservation: salt, sugar, organic acids, SO2, nitrite and nitrates, ethylene oxide, antibiotics and bacteriocins.	20%	12

Unit 3: Dairy starter cultures, fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese, other fermented foods: dosa, sauerkraut, soy sauce and tampeh, Probiotics: Health benefits, types of microorganisms used; probiotic foods available in market	20%	12
Unit 4: Food intoxications: Staphylococcus aureus, Clostridium botulinum and mycotoxins; Food infections: *Bacillus cereus, Vibrio parahaemolyticusEscherichia coli, Salmonellosis, Shigellosis, Yersinia enterocolitica, Listeria monocytogenes and Campylobacter jejuni.*	20%	12
Unit 5: HACCP, Indices of food sanitary quality and sanitizers Cultural and rapid detection methods of food borne pathogens in foods and introduction to predictive microbiology	20%	12

List Of Practical	Weightage	Contact hours
1. MBRT of milk samples and their standard plate count. **2.** Alkaline phosphatase test to check the efficiency of pasteurization of milk.	**20%**	**12**
3. Isolation of any food borne bacteria from food products.	**20%**	**12**
4. Isolation of spoilage microorganisms from spoiled vegetables/fruits.	**20%**	**12**
5. Isolation of spoilage microorganisms from bread.	**20%**	**12**
6. Preparation of Yogurt/Dahi.	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Developed a clear understanding of the multifarious roles of microorganisms in soil, in association with plants and thus in the field of agriculture.	Remember	Explain, Describe, Discuss, Recall, Locate
CO2	Are able to describe the role of microorganisms in the production of food, its spoilage, including their role in homemade fermented foods.	Apply	Apply, Practice, Interpret, Select, Correlate
CO3	Are able to identify the role of microorganisms in the causation of the diseases and how to protect against food-borne pathogens.	Analyses	Compare, Classify, Select, Investigate
CO4	Developed experimental skills for testing the milk and different foods for the presence of microorganisms.	Create	Construct, Develop, Produce
CO5	To develop Understanding in dairy sciences.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB604	Course Name BIOSAFETY, BIOETHICS AND INTELLECTUAL PROPERTY RIGHTS	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of biosafety regulations, bioethics and Intellectual Property Rights (IPRs).
Course Category	Discipline Specific Course.
Course focus	Employability
Rationale	To have an overview of the basic knowledge of biosafety regulations, bioethics and Intellectual Property Rights (IPRs)
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** To understand various aspects of biosafety regulations, bioethics used in biological materials in the laboratory in context of environment and human health and Intellectual Property Rights concerns arising from the commercialization of biotech products. **Apply** Students will gain awareness about Intellectual Property Rights (IPRs) to take measure for the protection of their ideas. **ıalyses** They will be able to devise business strategies by taking account of IPRs. **eate** They will be able to assist in technology upgradation and enhancing competitiveness. **ıderstand** They will acquire adequate knowledge in the use of genetically modified organisms and its effect on human health.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Introduction of Biosafety in the laboratory, General principles for the laboratory and environmental biosafety, Biosafety guidelines, Biosafety levels, laboratory biosecurity concepts, Regulatory framework; National and international biosafety policies and law.	20%	12
Unit 2: Health aspects of Biosafety; toxicology, allergenicity, antibiotic resistance, Risk management issues and containment. Radiation safety and non-radio isotopic procedure.	20%	12
Unit 3: Good microbiological techniques and good laboratory practice (GLP), Basic principles of quality control (QA) and quality assurance (QC), Guidelines for QA and QC: raw materials, sterilization, media, stock cultures and products, Role of culture collection centre, public health laboratories and regulatory agencies.	20%	12
Unit 4: Concept of Intellectual properties, copyrights, trademarks, trade secrets, patents, geographical indications.	20%	12

Unit 5: Implications of intellectual property rights on the commercialization of biotechnology products. National and international patent act and amendments, patent filing.	20%	12

List Of Practical	Weightage	Contact hours
1: Understanding of the importance of good laboratory management and practices	**20%**	**12**
2: Lab SOPs/Protocols management.	**20%**	**12**
3: Lab QA/QC.	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

COURSE CODE BSMB605	COURSE NAME ENVIRONMENTAL MICROBIOLOGY	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	**Practical**	**Tutorial**	**Total Hours**	**Lecture**	**Practical**	**Tutorial**	**Total Credit**
60	60	0	120	4	2	0	6

Course Pre-requisites	Students should have basic knowledge about environmental science and students of all disciplines can think critically, ethically, and creatively when evaluating environmental issues
Course Category	Discipline Specific Course.
Course focus	Employability
Rationale	To have an overview of the environmental science and students of all disciplines can think critically, ethically, and creatively when evaluating environmental issues.
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** To introduce environmental microbiology and its scope **Apply** To understand the role of microbes in biogeochemistry **Analyses** To understand various modes of biotic interaction of microbes **Create** To get insights of role of microbes in pollution control **Understand** To get acquainted with applied aspects of environmental microbiology

Course Content (Theory)	Weightage	Contact hours
Unit 1: Microorganisms and their Habitats: Structure and function of ecosystems Terrestrial Environment: Soil profile and soil microflora Aquatic Environment: Microflora of fresh water and marine habitats Atmosphere: Aero microflora and dispersal of microbes Animal Environment: Microbes in/on human body (Microbiomes) & animal (ruminants) body. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels	20%	12
Unit 2: Microbial Interactions Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation Microbe-Plant interaction: Symbiotic and non-symbiotic interactions Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria	20%	12
Unit 3: Biogeochemical Cycling Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction Phosphorus cycle: Phosphate immobilization and solubilisation Sulphur cycle: Microbes involved in sulphur cycle Other elemental cycles: Iron and manganese.	20%	12

Unit 4: Waste Management Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill) Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment	20%	12
Unit 5: Microbial Bioremediation and Water Potability: Principles and degradation of common pesticides, hydrocarbons (oil spills). Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test/MPN test, confirmed and completed tests for fecal coliforms (b) Membrane filter technique and (c) Presence/absence tests.	20%	12

List Of Practical	Weightage	Contact hours
1. Analysis of soil - pH, moisture content, water holding capacity	10%	4
2. Determination of Chlorine in Water	10%	4
3. Finding MPN (Most Probable Number) of the water sample	10%	4
4. Measure mineral and phenolphthelin Acidity	10%	4
5. Study the presence of microbial activity by detecting (qualitatively) enzymes (dehydrogenase, amylase, urease) in soil.	10%	4
6. Isolation of Rhizobium from root nodules	10%	4
7. Isolation of microbes (bacteria & fungi) from rhizosphere and 8. rhizoplane.	10%	4
9. Find Dissolved Oxygen (DO) of the water sample	10%	4
10. Find Chemical Oxygen Demand (COD) of the water sample	10%	4
11. Find Biological Oxygen Demand (BOD) of the water sample	10%	4
12. Perform Presumptive test and Confirm test for Coliform	10%	4

Instructional Method and Pedagogy:

Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.

Course Objectives:		Blooms' Taxonomy Domain	Blooms' Taxonomy Sub Domain
CO1	Student will be able to demonstrate microbial diversity	Apply	Explain, Describe, Discuss, Recall, Locate
CO2	The students will be updated interaction of microbes with other organisms	Remember	Apply, Practice, Interpret, Select, Correlate
CO3	The students will be updated with general concepts role of microbes in biogeochemical cycling	Analyses	Compare, Classify, Select, Investigate
CO4	The students gain knowledge on general characteristics of fungi, bacteria, virus and mycoplasma like organisms causing plant diseases.	Create	Construct, Develop, Produce

CO5	Students will be acquainted with reproduction in fungi and fungal like organisms causing plant diseases.	Understand	Explain, Describe, outline, Predict, Summarize

COURSE CODE BSMB606	COURSE NAME ADVANCES IN MICROBIOLOGY	SEMESTER VI

Teaching Scheme (Hours)				Teaching Credit			
Lecture	Practical	Tutorial	Total Hours	Lecture	Practical	Tutorial	Total Credit
4	4	0	8	4	2	0	6

Course Pre-requisites	Students should have basic knowledge of advances in microbiology
Course Category	Professional Elective/Core Professional/Generic Elective/Courses Offered by other departments/Open Elective
Course focus	Employability
Rationale	To have an overview of the basic knowledge of advances in microbiology
Course Revision/ Approval Date:	14/03/2020
Course Objectives (As per Blooms' Taxonomy)	**Remember** Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes and also learn the theory and practical skills in microscopy handling and staining techniques **Apply** Know various Culture media and their applications and understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures **Analyses** Comprehend the various methods for identification of unknown microorganisms and study microbial metabolism – Autotrophy and heterotrophy modes of nutrition. **eate** Understand the microbial physiology and know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement **derstand** . derstand the regulation of biochemical pathway and possible process modifications for improved control over microorganisms for microbial product synthesis.

Course Content (Theory)	Weightage	Contact hours
Unit 1: Evolution of Microbial Genomes. Salient features of sequenced microbial genomes, core genome pool, flexible genome pool and concept of pangenome, Horizontal gene transfer (HGT), Evolution of bacterial virulence – Genomic islands, Pathogenicity islands (PAI) and their characteristics.	20%	12

Unit 2: Metagenomics. Brief history and development of metagenomics, understanding bacterial diversity using metagenomics approach, Prospecting genes of biotechnological importance using metagenomics. Basic knowledge of viral metagenome, meta transcriptomics, metaproteomic and metabolomics.	20%	12
Unit 3: Metagenomics. Brief history and development of metagenomics, understanding bacterial diversity using metagenomics approach, Prospecting genes of biotechnological importance using metagenomics. Basic knowledge of viral metagenome, meta transcriptomics, metaproteomic and metabolomics.	20%	12
Unit 4: Molecular Basis of Host-Microbe Interactions. Biofilms: types of microorganisms, molecular aspects and significance in environment, health care, virulence and antimicrobial resistance.	20%	12
Unit 5: Systems and Synthetic Biology. Networking in biological systems, Quorum sensing in bacteria, Co-ordinated regulation of bacterial virulence factors, Basics of synthesis of poliovirus in laboratory, Future implications of synthetic biology with respect to bacteria and viruses. Gene editing concept with suitable example	20%	12

List Of Practical	Weightage	Contact hours
1) Extraction of metagenomic DNA from soil.	**20%**	**12**
2) Understand the impediments in extracting metagenomic DNA from soil.	**20%**	**12**
3) PCR amplification of metagenomic DNA using universal 16s ribosomal gene primers.	**20%**	**12**
4) Case study to understand how the poliovirus genome was synthesized in the laboratory.	**20%**	**12**
5) Case study to understand how networking of metabolic pathways in bacteria takes place	**20%**	**12**

Instructional Method and Pedagogy:
Audio-Visual Lectures, Quizzes, Debates, Project works, Case studies, and Assignments Practical exercises are designed to understand the theory as taught in classroom. Hands on in practical session.
